PREFACE.

The thanks of the Author are offered to New College, Oxford, for permission freely to consult the documents preserved in their Muniment Room and to the Librarian for affording special facilities for work in the Library. Also he acknowledges with gratitude much assistance received from the Rev. H. Salter, M.A., whose valuable aid is always readily offered to those who deal with the records of Oxford and its County, Mr. C. R. Peers, Director of the Society of Antiquaries, Professor A. Hamilton Thompson, F.S.A., of the University of Leeds, Mr. F. E. Howard, of Oxford, Mr. Hilary Jenkinson, F.S.A., of the Public Record Office, and Mr. J. Hautenville Cope, F.R.Hist.S., the present Honorary Secretary and General Editor of the Society.

T.F.H.

As the newly appointed Hon. Secretary and General Editor of the Oxfordshire Record Society I should like to add a few lines to thank all those, who have so ably assisted me to produce this volume. First of all to the Warden and Fellows of New College for a welcome grant of £10 towards the publication of this volume, which has enabled us to produce the plan drawn by Mr. Howard, of Oxford. To Messrs. Burgess and Son, of Abingdon, who so readily came forward to undertake the contract and estimate, when the work had been returned by a local printer, and for the very prompt and efficient manner in which they have produced this number. Also thanks are due to those who have joined the Society, and I hope this forthcoming year will bring a further increase of subscribers into our ranks.

J.H.C.
INTRODUCTION.

The Compotus Rolls of the manor of Adderbury, a possession of New College, Oxford, which are printed here are selected from a long series of such Rolls, because they give the details of the construction, at the expense of the College, of the chancel of the village church between the years 1408 and 1419. They are the accounts of the receipts and expenses of the manor, which were rendered yearly to the College by the "Firmarius" or Bailiff, who during the years in question was one John Berewyk. He rented or took over, usually for a term of five years, renewed from time to time, the whole of the incomings belonging to the College, paying for them a fixed firma or rent of £5 13s. 4d., and doubtless making such profits as he could secure from the transaction. The accounts run in each case from 26 March, the day following the Feast of the Blessed Virgin Mary, to the date of that Feast, 25 March, in the following year. Their special interest lies in the fact that they record the details, sometimes imperfect, but often very full, of the erection of a beautiful and costly building, the main features of which are still undisturbed, although much "restoration" has taken place. They also give useful information about methods of building, conditions of labour, rendering of accounts, etc., during the late Middle Ages. These matters are commented upon in subsequent pages. The following is a summary of the building operations carried out, offered as an introduction to the Rolls, which are written in Latin.

1 Bailiff is perhaps the most convenient term for "firmarius," even if not absolutely accurate.
The heading *Novum Edificium* appears first in the Roll for 9–10 Henry IV. and marks the commencement of the rebuilding of the chancel. The sum spent is smaller than in any other year during the construction, being only £5 5s. 10½d. Richard Winchcombe commences work on the "principal window" and receives £2 in part payment on his contract for £5 13s. 4d. Eleven cartloads of stone are brought from Teynton and labourers start clearing a quarry at Adderbury itself for obtaining stone "for the building of the chancel." Wedges for splitting stone are purchased and Richard Young, described as a mason, Richard Palmer and Thomas Clerk are hired, the first at 4½d. per day, the others at lower wages, for short periods and are engaged in "scappling" or rough-hewing stone. The heading "New Building" appears again in the next Roll for 10–11 Henry IV., and shows a larger expenditure, £16 14s. 2½d. Richard Winchcombe continues his contract-work on the principal window of the chancel and earns a further sum of £1 13s. 4d. Labourers quarrying stone (at Adderbury ?) are paid £4 2s. 1d. and the wages of the several workmen engaged on scappling stone come to the fairly large sum of £7 19s. 5½d. Hammers, wedges and other requisites of both iron and wood are bought for use in the quarry and several carters are hired to cart stone from Teynton and also, apparently, from the local quarry. Finally Thomas Huntingdon is paid for timber purchased from him for work to be done for the chancel.

In the Roll for the year 11–12 Henry IV. a slightly larger outlay is recorded viz., £17 6s. 2½d., as expended on the new building. Neither the head mason—Winchcombe—nor any of the under-masons subsequently mentioned are named in the Roll. The main expense is for the wages of quarrymen and masons working at Teynton and also for stone bought from them "ad edificacionem cancellae," the sum given being £15 16s. 8d. The cost of cartage of stone from Teynton is
£1 4s. 7½d., which denotes quite a small amount, as from other Rolls it would appear that the usual charge was two shillings and sixpence per load. There is a significant entry of 4s. 11d. for "tabulis emptis pro moldes" and for hammers. These "moldes" seem to be what are now called "templets," guides used by masons for the shaping of their stones, cut out of thin boards (tabule) or in modern times out of sheet zinc. Winchcombe's work on the chancel window was not continued and he was absent during this period. None of the other masons were at work at Adderbury and the year was evidently one of preparation and used for the collection of materials. A small expense is noted for repairs of other buildings, probably the hall and certain chambers in the rectory.

The year 12–13 Henry IV. is again an easy year, the expenditure falling to £12 19s. 6d. Winchcombe is, however, present for a time at least and completes his work upon what is here called the "Gable-window." He and his socii or fellow masons are paid for scappling stone and Gylkes, the (local) carpenter, receives £1 7s. 10d. for timber bought in the Forest of Wychwood for the chancel and for carting it to Adderbury. There is a purchase of more timber at Wychwood and of more stone at Teynton.

The first four years of building constitute a period of preparation and preliminary work, mainly occupied with quarrying, carting, scappling of stone and the preparation of the stonework for the great east window. Winchcombe is recorded as present during the first, second and fourth years, engaged on his contract for this window and during the third year he does not seem to have attended. The total expenditure for these four years is only slightly over £52 or an average of

1 "Factura de le Gabilwyndowe" must mean the "preparation" of the stones for the window, which was not placed in position until the following year—13 Henry IV.—1 Henry V.—when the "Synotor," or wooden mechanism for centreing the arch, was used "pro magna feneatra deponenda."
£13 in each year. Nothing is contributed by the College directly towards the cost, which is defrayed out of the bailiff's rent, and a considerable surplus, amounting during the four years to about £178 (a yearly average of £44 10s. 0d.) is handed over to the College. The following four years are those of greatest activity and largest expense. Winchcombe appears to have been present throughout this later period and in constant charge of the operations. The total outlay for these four years is just over £270 (a yearly average of £67 10s. 0d.); and no surplus is paid to the College, while the bursars contribute on behalf of the College sums amounting in all to over £61, to be used for building.

During the year 13 Henry IV.—1 Henry V. the expense recorded for building is £52 13s. 9½d., which exceeds the entire total for the first four years. It is detailed under three headings. The first is "Purchase of stores, stones and implements"—£13 19s. 11¾d. This includes freestone bought at Teynton (£5 5s. 9d.) and the cartage of fifty loads of stone from that quarry, the price per load being two shillings and sixpence, a considerable sum, but doubtless justified by the distance—about twenty miles—and the probable state of the roads or tracks. The vicar (John Monk) seems to have done the larger part of the carting and instead of taking the full amount due of £4 7s. 6d. received only £2 5s. 0d. and made a present to the College of the surplus. Stokton, the smith, provides six hinges for the doors of the chancel, the sacristy and the staircase. A new wedge is purchased and all wedges and picks are welded and steeled. The smith of Charlton receives 40s. 2d. for 251 pounds of ironwork and a quantity of utensils, etc., needed for the work are procured—a tub for carrying water, bowls, casks, sieves, ladles, dishes, a sling for raising stones, a basket for moving lime and hurdles for making the scaffold. The need for the scaffold points to a much more advanced stage of construction. Certain small items at the
end of this heading seem to refer to work other than that in the chancel.

The wage item in this year (payments to masons and labourers) is large—£37 8s. 7d.—although not so large as in any of the subsequent three years. In this account the rates of weekly wages paid to masons, etc., are given and upon these I have commented elsewhere. Winchcombe with his apprentice and the other masons do not appear to have been in constant attendance until after February 18th. Reed and Saltcombe—the two chief craftsmen under Winchcombe—are paid 6s. 0d. for advice, possibly during the absence of their master mason. A lump sum of £5 16s. 5½d. is given as paid to a labourer named Gentleman and seven other labourers for general work between 1 April and 6 October and Gentleman and his socii are also paid 16s. 8d. for piece work in laying the walls of the chancel and digging the foundations. Further expense is recorded in connexion with the *magna fenestra* and other windows, including the making of a "synctor," for centreing the arch. Gylkes the carpenter and his "famulus" are employed in making barrows, sleds, hods and trays and a carpenter is engaged to prop the barn for making or extending the quarry, the foundations possibly being underpinned. Again some small items are possibly not referable to the chancel.

A third heading appears; "Necessary and outside costs with expenses of the Warden and others," with an outlay of £1 10s. 6d., out of which £1 5s. 3d. concerns the chancel. Ale to the value of one shilling is provided for the carters bringing the stone for the foundations, a foundation ceremony possibly being indicated. More ale is provided for the masons and labourers. Reed, the second mason, is paid for riding to Teynton, probably for the choice of better stone. Hoops are bought for a tub and a cask and also grease for the "vernum." This entry is premature, for the purchase of this machine
appears in the next account. Master W. Mownter\(^1\) has his expenses paid for riding to Teynton and Wychwood, evidently on the business of selecting building-stone and timber. And the account finally contains the charge for the "commons" of Master W. Mownter, living with the vicar for sixteen weeks, and those of his attendant boy for five weeks. The receipts for this year include a sum of £1 6s. 8d. for the sale to Richard Dene of window glass with frame-work, probably from the old chancel. During this year the total expenditure is about equal in amount to the bailiff's rent and there is no surplus to hand over to the College bursars, although no direct contribution is made from College funds towards the work.

In the next account year—1–2 Henry V.—the sums spent upon the chancel are greater than those of any other of the ten years of building, both in materials and in wages, and amount in all to £83 12s. 10d. As a consequence of this the College is under the necessity of making a direct contribution from its funds, viz., £26 13s. 0d. "Purchase of stores and other requisites" accounts for £27 17s. 11d. of the whole. Stone is bought at Teynton for £5 8s. 8d. and sixty-two loads are carted at 2s. 6d. per load from the quarry there by the bailiff, John Scott and the vicar who makes a present of 16s. 8d. to help the work, receiving £2 13s. 4d. only instead of his full charge of £3 10s. 0d. Eighteen quarters of quicklime are procured. Twenty-four cartloads of timber are brought from the Forest of Wychwood by Richard Bradwell and Robert at-the-Green-of-Walcot. It is evident that the walls had risen to a considerable height and that the stones could no longer be set in place by masons working from the ground. In the previous account the purchase of twenty-one hurdles is mentioned "pro scaffold faciendo" and here nails are bought "pro le scaffold faciendo." This of course means that the

\(^1\) See page 65.
rising walls were surrounded by scaffolds, constructed in much the same manner as at present except that hurdles were used for making platforms. In connexion with the mention of materials for the scaffolds the items in this Roll should be noted which deal with another necessary instrument. The sum of 15s. 7½d. is recorded as spent on the purchase of “i vernum cum rongis et virgis” i.e., a windlass or small crane with its framework and supports. This is a machine constantly appearing in mediaeval building accounts, sometimes under its English name of a “windas.” For its working a sling—“pro le vernum pro lapidibus levandis”—is bought for 6½d. Hoops—probably for the drum—and cramps to be used with it cost a further 2s. 3d., being supplied by William, the smith of Adderbury. The “vernun” would appear not to have worked quite satisfactorily for during the year John Carpenter and his famulus have to spend four and a half days over repairing it, at a cost of 3s. 9d. Wedges and picks and a “crow” are steeled and welded by the local smith, who also provides more hinges for the door of the sacristy and binds a hod with iron. The other items in the account are unimportant with the exception of the cartage of two large beams from Shipton, probably for the construction of the rood-loft.

In this year the account for wages—(wages of masons and labourers)—is the largest recorded, £54 10s. 6d. Payments to Winchcombe and his apprentice and to the other masons are given under three periods, from 8 October to All Saints Day (1 November), from that date until the Feast of the Purification (2 February) and from then until Michaelmas. Reed and Saltoombe, the two chief masons under Winchcombe, are employed during the entire time, other masons named being Norton, Payn, Rudyfer, Cropredy, Day and Newton, who receive the same wage as Reed and Saltoombe; Ypewell, receiving threepence a week less and Clerk, receiving a still lower wage. Gentleman at 1s. 6d. weekly and Mall, Yrysch,
Richard Berewyk and Hunt at 1s. 8d. weekly each—all labourers and employed at a much lower rate than any of the masons—are engaged in digging in the quarry and working for the masons for thirty weeks of the year. Finally John Carpenter, the most important workman after the master mason, receives £2 16s. 8d. in part payment of his contract price, the total of which is, as will be seen, £8 3s. 4d. for constructing the roof of the chancel. It is clear that by this time considerable progress has been made and that the walls are in places sufficiently high for work on the roof to be commenced.

A third heading appears in this account, "Expenses of the Warden and other outside expenses," the items in which are mostly referable to the building. Carpenter is paid 3s. 4d. for going to the College "pro taxa Cancelle capienda," that is, for getting his contract for making the roof. There would be a meeting with the College authorities, who doubtless looked and talked as wisely as they could, while the craftsman explained his ideas and plans and received their suggestions as deferentially as possible. Reed is sent off on a four days' tour to secure the assistance of masons. Probably few of these were local men; the masons were a travelling fraternity and went from place to place as their services were required. Winchcombe makes a special journey to Teynton to choose the stone wanted for the better work. William Mownter is paid his expenses for riding to Teynton and Charlbury (the latter in the Forest of Wychwood) to secure stone and timber respectively. Ale is provided for the masons and labourers on various occasions at a cost of fourteen pence. Master William (Mownter) has his "commons" paid for fifteen weeks at thirteenpence weekly, being in residence for supervision during this period, and his boy is with him for three weeks at fourpence weekly for his commons.

The succeeding year—2–3 Henry V.—is also expensive, the total disbursements amounting to £68 11s. 1½d., the bulk
INTRODUCTION.

of the expenditure being in wages. Here again the College assists with a contribution from its funds of £26 6s. 4d. The first heading, "Purchase of stores and other requisites," totals £13 7s. 6½d. only. It includes, inter alia, 118 pounds of ironwork, three hinge-parts for the upper door of the sacristy, the steeling and welding of wedges and picks, nails and hurdles for the scaffolds, an old cable, probably for the "vernum," bought in the previous year (10s. 0d.), a new cable bought during the year for 16s. 4d., and quick-lime. Further, John Colerne is paid for stone bought during the previous year and for freestone supplied from the quarry "ad edificacionem cancellae" during the year. John Scott brings twenty-seven and John Berewyk three cartloads of stone from the quarry at Teynton at two shillings and sixpence per load. The great expense of the year is for wages, £49 12s. 4d. The payments to the masons are chronicled under four periods, (1) from 1 October to the Feast of Simon and Jude (28 October), (2) from All Saints Day (1 November) to the Feast of the Purification (2 February) (a period of low wages), (3) thence onward to 3 August and (4) the time subsequent to this, the whole number of men not working for the entire period. The masons named are Winchcombe with his apprentice, Reed, Saltcombe, Rudyfer, Cropredy, Day, Clerk and Ypewell, but they do not appear all to have been employed for the whole time. Norton, Payn and Newton fall out and three new men appear—Birch, Palmer and Lawrence—Birch being one of the superior workmen. The labourers—digging in the quarry and working for the masons—are very much the same as before, but are noted only for the period from 2 February to 3 August. John Carpenter continues his contract work on the roof and earns a further sum of £2 13s. 4d.

In this account a new heading appears, "Costs of carts and other requisites," occasioned apparently by the amount of cartage which was going on. Possibly some of the carting
was done by customary tenants, the College providing the provender for the horses and paying for repairs. Straw, peas, hay and oats are paid for and also the expenses of repairing harness and carts. During three parts of the year a special carter is employed at a salary of fifteen shillings with nineteen and tenpence for his commons. The total under this heading is £5 11s. 3d. Under a separate small heading are given the expenses of the Warden and others with him and also the local contribution towards the maintenance of the clerical representatives at the Council of Constance, "pro unione habenda," for securing the unity of Christendom. The important events then taking place in Europe have their echo in the records of a remote Oxfordshire manor. An allowance of 13s. 4d. is made to W.M.—Master William Mownter—for his work during the previous year and an item of one pound is introduced to cover the wages of certain masons omitted in the account.

In 3–4 Henry V. there is almost equal activity, at an expense of £65 8s. 2d. The total under the heading "Empcio stauri cum aliis necessariis" is very much the same as in the previous year—£13 12s. 9½d. There is a purchase of 138 lbs. of ironwork from the smith of Charlton and 3s. 9d. is paid for cutting and making iron instruments from material belonging to the College. The "vernum" gives trouble and a small sum is paid for mending it. A considerable quantity of freestone is bought from John Colerne of Teynton and the vicar, John Scott and Berewyk do a fair amount of cartage, evidently from Teynton, as the old rate of half-a-crown per load is paid. A new carter appears, John Moreys. "Soluciones Lathamorum" is again a considerable item—£42 7s. 10½d. though slightly lower than in the previous year. In the heading itself it is specifically given as being for the period from 5 October until the following Michaelmas. The masons named include Winchcombe with his apprentice, Reed, Saltcombe, Birch, Payn (all mentioned
before), and three new men, Salford, Thomas Mason, and the father of the apprentice; Rudyfer, Day, Cropredy, Clerk and Ypewell falling out from the list. The wages of the masons account for most of the total. Those of the labourers come to only £2 0s. 4½d. and no names are given. This seems to point to the fact that most of the rough labour is finished and that active operations are confined to masons doing the finer work. A small allowance is made to the vicar for some item omitted in the previous account. A third heading is "Outside payments and payments to glaziers" which is significant, as noting the entry upon the scene of the glaziers, who receive in part-payment of contract work the sum of £9. One other small charge is for "tips" given to masons and labourers during the year by order of the Warden. A fourth heading—"Expense Forinsece"—includes a further charge for the expenses of the clerical delegates at the Council of Constance—"pro unione habenda"—and also 5s. 0d. for those attending two Convocations at London. The allowances include one of £1 to Master John Love for services in the supervision of the work. Receipts are increased by a third—the last—contribution from College funds, £8 10s. 10d.; further by payments from two other manors, £1 4s. 0½d. from Cheekmore and £2 from Kingham, and also by the sale to the vicar, from store, of four horses with their harness and of a cart. Under this heading a total of £13 1s. 6½d. is recorded. This is the last account in which any considerable addition from outside sources (Forinsece) is noted beyond the usual rental paid by the Firmarius. It is in fact the last year of the chancel building in which any such addition is needed as henceforward the outgoings are not nearly so large.

This is seen in the succeeding account for 4–5 Henry V. where there is a fall in total expenditure to £45 9s. 0½d. "Empcio stauri cum aliis necessariis" is much as before—£14 15s. 1d. The larger items of outlay are again for freestone
bought and carted, 875 feet of stone costing £7 5s. 11d., thirty-two loads of stone being carted from Teynton at 2s. 6d. per load, and carts being also hired for the same purpose. The *vernun* again needs mending rather more elaborately, 7s. 6d. being paid for repairs at divers times and for timber used. The internal work is evidently commenced, as “Estrichbords”—(boards for panelling) are bought and 2900 nails of various kinds are purchased for the roofing of the chancel, and the cart of the “firmarius” is hired for carting boards from Oxford. The heading “Soluciones Lathamorum et Vitrariorum” comes to over £30. Winchcombe with his apprentice are at work with Saltcombe, Reed, Salford and the apprentice’s father for a short time in October and the two former with Saltecombe, Salford and a new man, Warren, from the period from 6 June to 3 October. The number of the masons named is small and Reed, who has hitherto been constant in attendance, now falls out. On the other hand a special payment of £3 18s. 10d. is given as made to Winchcombe alone, who does not seem to have had in this particular matter even the help of his apprentice. This payment is for the shaping and carving or chipping (pro quadracione et dolacione) of 122 feet of stone at 2½d. per foot for the “aloures” (parapet or roof gangways) and for the “watertabula” (the weathering or sloping ledge for carrying off water), of 131 feet of ashlar at 1d. per foot and of 85 feet of stone “de le crest” (for the copings), at sixpence per foot. These items mark the final stages of the construction and it is significant for Winchcombe’s general position in connexion with the whole work that he alone is engaged on the most important and finer labour. The completion of the roofing is shown by a final payment of £2 13s. 4d. to Carpenter in full discharge of his contract price. Apparently it was finished to the satisfaction of his employers, for he receives a “reward” or tip of 13s. 4d. in addition to his full price for the job. Plumbers are at work for the first time
in leading the roof and a man is hired for plastering the walls of the chancel. A further payment of £10 is entered as made to the glaziers on account of their work on three windows. A third heading notes tips given by the Warden from time to time to the carpenters and masons and to the carpenters specially at the time of setting in position the roof timbers, and also the expenses of three masons riding to the quarry about contract work, probably in connexion with the choosing of the best stone for the finer work. There is a small entry of twopence for parchment for making out this particular account. Possibly for previous accounts the material had been furnished by the College. In consequence of the decrease in expenditure the bailiff is for the first time for five years in a position to make a payment to the bursars of the College, the sum paid being £12 3s. 4d.

During the next year, 5–6 Henry V., the building of the chancel is finished. The main heading of the Account Roll, comprising a total expenditure of £24 10s. 7½d., although entitled "Costs of repairs to buildings and purchase of stores" which gives the idea that it deals with repairs to ordinary buildings only, is in fact concerned almost entirely with the chancel, and includes both material and wages, which are no longer kept under separate heads. Certain small items do however concern repairs to other buildings. For the chancel the following may be noted. The last stone needed is bought, ninety-six feet of freestone from John Colerne and other quarrymen, at Teynton, and carters are hired for bringing it to Adderbury, at the old half-crown rate. Small repairs are needed for the new building, nails, "pro reparacione cancella" and solder "pro reparacione plumbi." Locks with keys and rings are procured for the three doors in the chancel, as also divers ironwork. A plasterer is at work on the walls. Seven carts are engaged to bring stone from Oxford. The wage items in this heading are considerable. Winchcombe, who
alone is mentioned by name, and other masons are paid for four weeks from October 3 to November 1. Winchcombe alone is hired for the completion of the chancel on contract terms and receives the large sum of £6, which includes “rewards” to himself and his assistants or “famuli.” As usual certain labourers, unnamed, are paid for work done for the masons. Finally the glaziers receive the balance of their contract price in full discharge for the entire glazing of the chancel windows. The sum paid is £10 6s. 8d., making the total cost of the glass amount to £29 6s. 4d., a large sum, about one-thirteenth of the entire expense of the chancel. In this account three small extra receipts are recorded and a large item of expense is brought in from a back year, one hundred sheep bought from John Berewyk and handed over to store at Weedon. John Berewyk, the bailiff, dies during this year and is succeeded by a new official, Simon Veysey, both names appearing at the head of the Roll. The total of the chancel expenditure in this year is only £21 2s. 9½d. and a considerable surplus is handed over to the College. There are two small sums “allowed,” one of twenty shillings stated by Master William Monk to have been paid to Winchcombe, a “respite” from the previous account, and twenty pence for hay bought for the carpenter’s horse. This probably refers to the John Carpenter who contracted for the chancel roof and who seems not to have been a local man. He possibly had the keep of his horse on occasions when he was working on the spot, in addition to his price for the job.

The Roll for the year 6–7 Henry V. records only a small expenditure, mainly upon the repairs of ordinary buildings, as shown by the heading “Custus domorum” and I have included it in the series printed here chiefly as a specimen of the usual manorial repairing accounts. This heading contains only one item referable to the chancel, the insignificant sum of four shillings spent “in iii. quarteriis calcis vive emptis pro
pavimento Cancelle,” four quarters of quicklime bought for the pavement of the chancel. Under a special heading of outside payments—(soluciones forinsece)—however are shown the final items of cost for the chancel. These are one hundred shillings “pro consecracione nove cancelle apud Abberbury” and a small charge of six shillings and eightpence “pro implecacione quarure ibidem infra ortum Rectorie.” This last obviously refers to the small quarry opened at Adderbury itself in the early days of building, for the supply of the inferior stone used. The entry in the Roll for 9–10 Henry IV. is: “In soluto diversis laboraruis laborantibus in quarera de Abberbury pro terra fodienda et pro fondamentis quarere habendis et petris fodiendis ad edificacionem Cancelle ibidem.” We now learn that it was situated within the garden of the rectory. Having served its purpose of assisting with the supply of stone it is filled in.

It is not difficult to ascertain from the Account Rolls for the eleven years under review the total cost to the College of building the new chancel. I have, in order to obtain this figure, run together the amounts of receipt and expenditure for the eleven years,¹ of which it will be remembered that ten only were years of building, the eleventh Roll containing only the very small charge for the pavement and the two items for the consecration and for filling in the quarry. On the receipt side the total amount of rent or firma received is £604 6s. 8d., for the first ten years £54 13s. 4d. yearly with an increase of £3 in the last year, under Simon Veysey. A direct contribution of £61 10s. 2d. is made from College funds in three instalments. The sundry receipts from other manors, sales, etc., amount to £8 19s. 2½d. These sums together with the arrears brought forward from the year 8–9 Henry IV. total £719 9s. 3½d.

¹ See pp. 24 and 25.
INTRODUCTION.

The figures on the expenditure side are as follows. The rent due to the Bishop of Winchester of one penny annually was only paid for the first seven years and was then allowed to fall into arrear. "Sundries"—the proportion paid towards the expenses of the Clergy and Ambassadors (Ambasciatores), a payment to the parishioners "pro ecclesia reconcilianda" and parchment account for £2 8s. 10½d. The expenses of the Warden and his companions come to £3 10s. 9d. A sum of £262 11s. 5½d. was paid over to the bursars of the College. "Custus Domorum," ordinary building repairs, account for £11 15s. 7½d.; this figure being arrived at by extracting from some of the headings items which have no relation to the chancel. Sheep bought and handed over to store at Weedon cost £7 10s. 0d. From the "allowances" I have taken out sums clearly referable to supervision and work in connexion with the chancel, in all £4 11s. 1½d., and added them to the cost of building, leaving £14 18s. 3½d. as "allowed" under other heads. The figures being thus re-arranged I have arrived at a sum total of £399 5s. 4d. for the entire cost to the College of the chancel.

It will naturally be asked: What sum does this represent at present values? The question is extremely difficult to answer with accuracy. After a careful consideration of the differing estimates given by several historians and economists as to the comparative values of money in the 15th and 20th centuries it seems to me reasonable to accept as a multiplier the figure of thirty. This is, I believe, certainly not an over-estimate and it may well be an under-estimate to the extent of ten per cent. or more. It must be remembered that building costs have at least doubled since the War. If this figure is fairly correct (but I have no desire to force it upon my readers) the entire cost of the chancel would be approximately £12,000 in our present money, which is not improbable. Similarly, to take definite items, the contract prices given in certain cases would
be: for the work of the glaziers about £900, for the roofing by John Carpenter about £250, for the making of the east window by Winchcombe, to take one instance only of his special work, about £180. Some idea may be obtained as to the cost in modern money of any item in the whole series of accounts by using the suggested multiplier of thirty.

NOTE.—The spelling of the medieval scribe is capricious and variable, e.g. the varying forms of the word “lathamus.” Contractions occasionally render the exact sense doubtful and it is hardly to be hoped that the transcripts are wholly free from error in the extensions adopted.

1 This item of expense is not explained in the Compotus
Rolls, but it appears among the outgoings in the "Valor Ecclesi-aticus" of 1534 as a yearly rent paid to the Bishop of Winchester
for a plot of ground lying in the village and used for the purpose
of depositing manure, "pro una parcela terrae jacente in vico
pro fimo superponendo."

\[ \text{\textbf{Total:} } £719 9 3 \frac{1}{2} \]
The first question asked by any modern observer interested in a fine building, ecclesiastical or secular, would probably be as to the personality of the man who made the design for it and who drew the plans. He would then hear the name of a professional man, the architect, whose special function it is in modern life to design buildings, to execute the necessary plans and elevations, and to supply the information which enables the contractor to give a tender. In large contracts another professional man, the quantity surveyor, would also be employed. After these come, in many cases, the "clerk of the works," acting on behalf of the employer, who sees that proper materials are used and work is efficiently done, and lastly, in all cases, the contractor or builder, who undertakes the practical erection of the building and engages workmen of different trades to execute the details. The architect's work is done in the office and at the desk. The builder, the practical man, is an instrument to carry out the designs of the professional expert.

In the Middle Ages the case was different. It is true that we find the names of great ecclesiastical dignitaries, a bishop, an abbot or a prior, associated by tradition with the designing of many of our cathedrals. Alan of Walsingham for instance is named in connexion with the building of the octagon at Ely, St. Hugh with that of the choir at Lincoln and William of Wykeham with that of the nave at Winchester. Quite possibly these great people may have suggested the general conception which was carried out. There is no proof that they made the designs or supplied the details. The mediaeval architect was the master mason, the chief of the working masons, and it was he who supplied such designs as were used and who supervised the actual work of building. His training was not in draughtsmanship nor did he spend long years in a professional man's office learning his trade. His skill was acquired at the bench, through the use of mallet and chisel. There was in fact in practice no distinction between professional and manual work, between the artist and the artizan or craftsman. Charles Reade's description (in "The Cloister and the Hearth") of conditions in art in the fifteenth century is apt. "For this was a century in which the fine arts and the higher mechanical

Deltr.
arts were not separated by any distinct boundary, nor were those who practised them, and it was an age in which artists sought out and loved one another." Design with the experienced mason was largely a matter of intuition and he was allowed free play for his fancy. Hence the infinite variety found in the design and details of our English churches.

There is little information to be found in mediaeval archives as to plans or drawings for building, although in every case the master mason probably supplied patterns for mouldings and other details, the "moldes" referred to at Adderbury. In one instance only has the note-book or sketch-book of a mediaeval mason survived, that of Wilard de Honecourt, a French mason who in the course of his travels noted down matters of architectural importance, elevations and rough plans of buildings, which interested him possibly as models for future work, details of window-tracery, even mechanism used for practical work, etc. Much work was done by eye alone without plan or elevation.

But in fact the master mason, where he is named, did appear to have attained an almost professional status. He is frequently called "Magister," not in the academic sense, but as a title of honour. He had special privileges such as a gown of livery, a house or lodging, various special allowances and above all he took and trained apprentices. His importance will be realized when it is remembered that practically every problem of building was a masonry problem and that in the absence of text books of architecture all necessary knowledge was acquired by practical work at the bench. In the later Middle Ages, when splendid roofs were made and when stained glass was employed to fill the large windows, the carpenter and the glazier were very important craftsmen, but their work was dependent upon and conditioned by the main design of the mason.

These preliminary observations clear the way for obtaining an answer to the question: Who was the "architect" of the chancel of Adderbury? It has hitherto always been attributed to William of Wykeham. The claim made for the great Bishop to a distinguished place in the history of art as an architect is not founded upon conclusive evidence. Doubtless he was a great builder in the sense that he originated and financed great works of building. His supervision of the "King's Works" under Edward III. demanded no special skill in architecture (a similar position was held at a later date, in 1390, by the poet Chaucer) and pointed rather to financial
It is interesting that the adjacent ability of workmen is no longer attributed by Mr. C. E. Keyser, F.S.A., to the bishop the designing and execution of the remarkable series of sculptures on the cornice-friezes of certain churches in North Oxfordshire and the adjacent district, one of which is Adderbury. It is inferred that the two interlaced Ws carved upon a shield at the east end on the south side of the south aisle cornice at Adderbury show the connexion with Wykeham. These carvings are not however on the chancel and further they are referred by Mr. Keyser to an early stage in the bishop's life, between 1346 and 1365. Even this evidence is hardly strong enough to prove Wykeham's claim to be a great architect, and the evidence has no application to the chancel of Adderbury.

There is no doubt as to the date of the construction of this. William of Wykeham died in 1404. The Adderbury Comptus Rolls show that the "Novum Edificium" of the chancel commenced during the account year 26 March, 1408, to 25 March, 1409, and that for all practical purposes it was finished during the year 26 March, 1417, to 25 March, 1418. The only large payment during the following year is for the consecration. It cannot therefore be suggested that it was

1 There are several contemporary references to William Winford. Calendar of Patent Rolls, 1361–1364, p. 271. He was appointed for one year to impress workmen for the King's works at Windsor. William of Wykeham was then "Surveyor of the King's Works" there. Calendar of Patent Rolls, 1381–1385, p. 372. On the supplication of William of Wykeham and the Bishop of Llandaff a grant of £10 yearly was made to him, he being described as "one of the masons of the late King." Calendar of Patent Rolls, 1388–1392. Master Henry Yvelle and Master William Winford were appointed for seven years to repair the walls etc. of Winchester Castle. In an Account Roll of Winchester College for 1394–5 he is recorded as making a contract with certain masons and carpenters for the construction of the Outer Tower. In Wykeham's Register (Hants. Record Society) II., p. 543, he is mentioned as receiving permission from the Bishop to have a private oratory in his house. The will of William of Wykeham, 24 July, 1403, contains the clause:

"Volo etiam et ordino quod dispositio et ordinatio hujusmodi novi operis (i.e. the rebuilding of the nave of Winchester Cathedral) fiunt per Magistrum Willelum Winford et alios sufficientes discretos et in arte illa approbatis ab Executoribus meis si opportuerit deputandos; ac quod Dominus Simon Membury nunc dicti operis Supervisor necnon et Solutor sit etiam etiam Omnium el Supervisor in futurum durante operae supradictae."

Finally there is the significant fact that the East window of the Chapel of Winchester College contains a panel with three portraits of (i) an unnamed carpenter, (ii) "Will'ms Wynford lathamus" and (iii) Dominus Simon Membury. The introduction of the portrait of Winford in this important position seems to indicate that he was the "lathamus" or master-mason who designed and built the Chapel.
carried out under either the professional or the financial supervision of the bishop himself. The entire cost of the erection was defrayed by his Oxford foundation—"Seint Marie College of Wynchestre in Oxenford"—or New College, as it was called later. The Warden and Fellows were the employers who decided upon the construction and, through their agents, retained and paid the workmen engaged. The advowson of Adderbury had been presented to the College by its founder in 1381 and the revenues of the church had been "appropriated" to its use. The object was of course the enrichment of the College. In this case the College took a higher view of its liabilities than was usual in the case of many appropriations to the use of ecclesiastical foundations. The repair of the chancel and of the rectory was specially excepted from the duties thrown upon the Vicar in the endowment of the vicarage. Doubtless the chancel was ruinous and the College authorities decided to rebuild it. Even assuming that their Founder was in fact possessed of professional skill in building they could not look to him for guidance or assistance. The only names which can be connected with the Novum Edificium during the ten years of chancel building are those mentioned in the Comptus Rolls for those years.

One name is prominent, that of Richard Winchcombe, "Lathamus" which appears in each of the Rolls except that for the third year, 11-12 Henry IV. Wherever his name is mentioned it is placed first among those of the workers. His pay is by far the highest, averaging about twice that of any other mason. His wage is a high one, in summer 6s. 1d. weekly or slightly over a shilling for each working day, during the days of shorter light at the lowest 4s. 10d. weekly or just under tenpence per day. It is even generous, for it may be compared with that of a mason who was better known in his time than Winchcombe was at this date. Henry de Yeveley, who died in 1400, and who attained a considerable position, worked for the King at Westminster in 1365 at a wage of one shilling a day. Later he used the title of "Magister" and was engaged to furnish the design for preparing the walls of the Great Hall of Westminster Palace to receive the new roof. The work was to be done "selone le purport d'une forme et molde faite par conseil de mestre Henri Yeveley." He, like Winchcombe, is described as "Lathamus" or mason. The leading position of Winchcombe is further marked by the fact that he alone among the Adderbury masons is mentioned as working with "his apprentice." For the first four years of building Winch-
combe works alone or with "socii" or fellow-masons. Then for five years he is described as working with his apprentice. Wages are paid to him "for himself and his apprentice" or the two "receive between them" so and so much. The payment was of course the recompence of Winchcombe's personal skill and went to him. Anything received by the apprentice would be a matter of arrangement between his master and himself and even during the last year of service his actual money remuneration would be small. It seems probable that the lad in question here came of a mason's family for in two of the Rolls his father is referred to as one of the masons working. The fact that he is here is evidence of Winchcombe's skill and of his established position as a master mason, and further proof for both is available from the Rolls.

There is only one year out of ten—11-12 Henry IV.—in which his name does not appear. In 9-10, 10-11, and 12-13 Henry IV. he is employed in making anew the "fenestra principalis ad Cancellam" or as it is once called "le Gabil-wyndowe dicte Cancellœ," an important window, for upon it would be ranged the remainder of the construction. No assistants are named. The total payment made to him for this is £5 13s. 0d. In the last of the three years mentioned he is further employed with "socii sui," certain unnamed assistants, probably some of the masons who worked under him later, on day-work in scappling or rough-hewing stone. During the whole of this early period he probably worked from time to time only, as and when his special task demanded attention. For the remaining six years he is present during most of the year. In 13 Henry IV.—1 Henry V. it appears that he was present for a fortnight before 1 November and was then away until 18 February. In the same year a payment is noted to Reed and Saltcombe, who were certainly the two leading masons after Winchcombe, of 6s. for "advice." They would naturally have knowledge of the general design and of the intentions of their master mason and during his long absence of nearly four months matters would arise which demanded immediate decision, in which their assistance was needed and was paid for. Then for four years he is in constant attendance. During the following year—4-5 Henry V.—there is no record of his wages between October and June, but he is paid for a very special piece of work at a contract price. Possibly he was engaged on this during the interval. The sum paid was £3 18s. 10d. and the work consisted of the shaping and carving of stone used for the parapets and copings etc. Winchcombe
alone is mentioned as engaged upon this. During the final year, 5-6 Henry V., wages are recorded as paid to him and other masons from 3 October to 1 November only, but he alone was hired to complete the “end” of the chancel. This he did as contract work—“ad tascham”—and the amount paid, £6, includes “rewards” or tips to him and to his “famuli” or assistants. During this year the apprentice is not mentioned.

It appears therefore that all work which is considered to deserve special mention in the accounts is entrusted to Winchcombe alone, and it is obvious that he acted as the organizer and supervisor of all arrangements for masonry work, which was done under his direction and according to his designs. He was in fact what would now be called the “architect,” working himself, but acting also as the leader and director of a band of trained artizans. The masons were a travelling fraternity, moving from place to place as work was available. It will be noted that only two others, Reed and Saltcombe, are noted as present during all the important years of construction at Adderbury. The rest of the masons came and went as required and from time to time it became necessary for someone to ride elsewhere “pro lathamis adquirendis,” to find and engage masons. Reed, for instance, is mentioned as doing this. The masons do not seem to have been organized in a formal Guild as most other craftsmen were. Except in the largest towns their numbers were not sufficient to permit of this and their work would constantly call them away to distant places. Where many were working together rules for the conduct of their work were often drawn up. Those in force at York during the construction of the choir are elsewhere referred to. Those framed in London in 1356 by a Commission of six mason-hewers and six light masons or mason-setters are given in Riley’s “Memorials of London Life,” p. 280. No record survives of any such rules at Adderbury, although several masons were regularly employed there.

But the master mason, however eminent, was not responsible for every detail of the completed fabric, which demanded the skill of at least two other specialists, the carpenter and the glazier. As may be expected these were not called in until a late stage in building. The roof is not referred to until the sixth year. In that and the succeeding year John Carpenter is paid £5 10s. 0d. for piece work on it. During the eighth year his work was discontinued, but it was resumed and finished in the ninth year. He is then paid a further sum of £2 13s. 4d. for the completion of his contract with an additional 13s. 4d.
beyond his contract price. The total cost of the roof was therefore £8 16s. 8d. The John Carpenter responsible for the roof seems to have been an outsider, for the local carpenter, mentioned once in these building accounts and referred to in earlier and later Rolls as engaged on jobbing work at Adderbury, was John Gylkes.

The glaziers employed are not mentioned by their names. Their work was contract work and they received on account payments of £9 in the eighth year and £10 in the ninth year. The final payment of £10 6s. 8d., was made to them in the tenth year, bringing the total cost to £29 6s. 8d., which was about one-thirteenth of the entire cost of the erection of the Chancel. The last payment is recorded as being in full satisfaction of the contract price for the entire glazing of the Chancel—"in completa solucione tocius vitriacionis dicte Cancelle." It is unfortunate that no names are recorded. As it is there is no means of knowing whether English or foreign glass was used or whether the workmen were natives or from the Low Countries, whence much stained glass was imported at this time.

There is no reason to doubt the identity of our master mason with the "Richard Wynchecombe," who is mentioned in a deed dated 4 August, 1430, printed in "Epistole Academice Oxon," I., p. 46 (Oxford Historical Society, 1898) which is as follows:

"Universis Christi fidelibus, presentes literas inspecturis, Cancellarius Universitatis Oxoniensis et eadem Universitas salutem; Sciatis nos concessisse magistro Ricardo Wynchecombe lathomio unam pensionem quadraginta solidorum sterlingorum annuatim solvendam ad festa S. Michaelis Archangeli et Pasche per equales porciones, quamdiu ipse steterit et intenderit ad supervidendum opus novarum scolarum theologie in dicta Universitate; et unam togam de liberata generosorum quolibet anno, vel tredecim solidos et quatuor denarios pro eadem; ac qualibet septimana, cum presens ad opus ibidem fuerit, quatuor solidos sterlingorum pro stipendio suo. Et dictus magister Ricardus habebit unum mansum competens pro se et suis consortibus, et fenum sufficiens pro uno equo, cum idem Ricardus presens fuerit ad dictum opus, sumptibus dictae Universitatis; et habebit eiam rationables expenses, quocies missus fuerit in negociis dicte Universitatis. Data Oxonie in nostre congregacionis domo, quarto die Augusti anno regni regis Henrici sexti post conquestum octavo."

Thus we find that twelve years after the completion of Adderbury chancel Wynchcombe had risen to a position of
great importance. He is here styled "Magister" and is appointed by the University of Oxford to be director of the work at the new Divinity School. He has an annual stipend of 40s. 0d., a gown worth 13s. 4d. and a weekly wage of 4s. 0d. when at work in Oxford, together with a lodging for himself and his fellow-workmen. Further he is allowed hay for his horse. Evidently he was not an Oxford man, but rode over from time to time. In all probability he drew the plans for the building and the "mansum competens" served not only as a lodging for himself when in Oxford and for the other masons at all times, but also as the office in which the technical work was to be carried on; it was the masons’ lodge and also what is elsewhere called the "trasour" or tracing office. It may well be that the authorities of New College, satisfied with the work done at Adderbury, had taken occasion to recommend Winchcombe to the notice of the University.

There is an interesting sequel. In "Epistolae Academicae Oxon," I. 191, is printed an indenture made between the University and one Thomas Elkyn "lathomiam." It would appear that Winchcombe had died and Elkyn is now—16 January, 1440—appointed in his place, "quantum pertinet ad lathomiam," to carry on the building "novarum scolarum Sacre Theologie." His pay is rather lower than that of his predecessor; one mark annually and a weekly wage of 4s. 0d. in summer and 3s. 4d. in winter, when he himself is at work. He has no gown and no lodging and no allowance of hay for his horse, which points to his being resident in Oxford, and above all he is not styled "Magister." He is to find other masons, the best and cheapest possible, but in number according to the wish of the supervisors of the work.

The deed then goes on to record that the University had been subject to some criticism on account of the too ornamental or decorative character of the work already done. "Plures magnates regni et alii sapientes non approbant, sed reprehendunt nimiam curiositatem incepti dicti operis." It was therefore decided that henceforward greater simplicity was to be observed, and the University made it a term of the contract with Elkyn "quod dictus Thomas retrahet deinceps, sicut jam retrahere incepit, supervacuum talem curiositatem dicti operis videlicet, in tabernaculis ymaginum, . . .1 casimentis et fylettis, et in alis frivolis curiositatis, que ad rem non pertinent, sed ad nimias et sumptuosas expensas dicte Universitatis et ad

1 A word here imperfect, apparently bate et, can it be batelmentis ἤ?
nimiam dicti operis tardacionem." He was to disarm criticism by cutting down all this excessive ornament, in canopies for images, casements, fillets and other frivolous "curiosities" which were not to the point and which only meant too great expense and undue delay in the completion of the work. The University had been begging for subscriptions in every possible quarter and doubtless some of the subscribers had suggested that their money was wasted over mere frivolities. Elkyn was evidently as a craftsman much inferior to Winchcombe in decorative skill but was capable of executing simpler work. Living and working in Oxford he was constantly under the eyes and the control of the supervisors. Winchcombe, riding over from time to time, may have had more freedom to exercise his fancy to the full in matters of ornamental detail.

RICHARD WINCHCOMBE'S WORK AT THE DIVINITY SCHOOL AND ELSEWHERE.

(For the following remarks I am indebted to Mr. F. E. Howard, Architect, of Oxford.)

Although it appears that the building of the Divinity School was commenced in 1424 it had apparently not proceeded further than the laying of the foundations two years later. There is no certainty of Winchcombe's connexion with the building until 1430 when he was appointed to supervise it. In January, 1439-40, a new master mason, Thomas Elkyn, was appointed to complete the work in a simpler manner.

It is not difficult to determine how much of the work at the Divinity School is due to Richard Winchcombe and to Thomas Elkyn respectively. The range of windows on the north side is elaborately moulded. The section of the mullions is very complex, with a multiplicity of bowtellis and fillets. The jamb and arch-mould is even more intricate, a suite of delicate mouldings being inserted in the usual wide casement-moulding of the period. The same style of treatment is carried through the mouldings of the east and west walls.\(^1\)

\(^1\) Casements are deep hollow mouldings, prevalent especially in the Perpendicular style. Fillets are small flat faces or bands used principally between mouldings, to separate them from one another. Bowtellis are round mouldings or beads, used also for the small shafts of clustered pillars in window or door jambs, mullions, etc.
The junction of the elaborate work of Winchcombe with the simpler and less costly work of Elkyn is seen in the south-west window. There the jamb adjoining the west end is moulded like the north windows as far up as the junction of the lower curve of the four-centred arch with the upper curve, where it leaves off abruptly, and the rest of the window has a plain broad casement-moulding. None of the other windows on the south side have the suite of mouldings inserted in the casement, until the south east window is reached. Here the elaborate mouldings of Winchcombe's work leave off at a lower level than at the west end, about four feet from the floor.

It would be unusual for three sides of a building to be completely finished before the fourth wall was commenced, and it becomes necessary, having determined the vertical junctions of the two periods, to ascertain how far the south wall had been carried up when Winchcombe ceased work and Elkyn took it over. At the bottom of the broad casements of the south windows may be seen small moulded bases, similar to those on the north side but dying into the moulding and supporting nothing. A closer examination shows that from the level of the window seat up to the glass line the casement-moulding is of plaster, and that Winchcombe's elaborate mouldings have been filled up with this material so as to bring them to the simpler section of the work above. The mullions below the glass line are of the same section as those on the north side but above this level they are simplified, by the omission of fillets. One or two of the piers show a noticeable "cripple" at the junction of the newer work, and the mouldings are worked with less precision than those on the north side. In many cases the moulding has had to be adjusted where one block did not fit accurately upon the other, suggesting that Elkyn was a much less skilful mason than his predecessor.

It seems perfectly clear that Winchcombe was responsible for the design of the entire building and also for the actual erection of the whole of the east, west and north sides and for the south wall up to the level of the glass line. The section of the piers and the design of the panelling of the end walls show clearly that he had also designed the vault, though it was not actually built until some forty years later, probably by William Orchard, as has been suggested by Sir William St. John Hope.

Turning now to Adderbury, there are very striking likenesses between the chancel of that church and the Divinity School, so striking that it is certain that the designs of both were conceived by the same man. Both works are remarkable for
the subtlety and delicacy of their mouldings. The bowtells are especially slender, and in both buildings, although naturally to a greater extent in the more costly Divinity School, they are provided with little bases of a most refined section. The base courses of both buildings, although differing considerably in detail, are of an originality and boldness very rare in the district. The window-sills are also very subtly moulded and this is a very uncommon feature locally, where sills are usually simply weathered. The windows are broad with four-centred arches, a form which in the early fifteenth century had not yet become general. In both buildings again the lower curve is very abrupt, and although in the Divinity School the upper curve is much flatter than at Adderbury this is evidently due to the necessity of making the curve of the window follow that of the wider arch of the intended vault. From the tracery nothing can be gathered for comparison, for that of Adderbury is wholly modern, having been renewed by Buckler during the restoration of 1831–34. Skelton’s print, dated 1824, is taken from a drawing made before the restoration and shows simple intersecting tracery in the east window, which is probably Georgian, while the north window is blocked. It is possible that this window retained its tracery behind the blocking, for the new work is of a very attractive design, though its entire renewal renders it useless as evidence. But the tracery of the windows of the Divinity School, although the mouldings are more elaborate, is very much like that of other windows which may be attributed to Winchcombe with some confidence.

In the Divinity School the window recess is brought down to form a window seat inside. At Adderbury this feature occurs only in the east window, where the recess frames a reredos. The north doorway in the chancel at Adderbury leading into the sacristy has very refined mouldings, and, as at the Divinity School, the casement is partly filled with a suite of fine mouldings and every bowtell has its little moulded base. The front of the sedilia at Adderbury has been entirely renewed but the interior is authentic and shows equal refinement of detail. The panelling of the backs, in the form of windows, shows on a tiny scale the moulded sill and minute base moulds to the bowtells which are so noticeable in the Divinity School.

There are in the district other works which are very probably by Winchcombe. The most important of those which may be confidently assigned to this master mason on architectural grounds is the very lovely Milcombe Chapel at Bloxham. Here the fourteenth century church evidently possessed a
transept, opening into the wide south aisle by a pair of arches similar to those which still exist on the north side of the Church. In this respect it was like Adderbury, which still retains both its transepts. The work which may be attributed to Winchcombe is the addition of a large chapel of two bays, opening into the aisle by two arches, the rebuilding of the east end of the aisle to correspond and the re-roofing of the aisle. Here the base courses are of a more normal form and much simpler than those at Adderbury, but the buttress weatherings are exactly similar in their elaborate mouldings, and the treatment of the pinnacles, although not alike, is similar in conception. In both cases they start considerably below the parapet. The parapet is in both cases without battlementing and although the sections of the "water-table" and "crest" are simpler at Bloxham, the gargoyles are certainly by the same hand.

It is, however, in the windows that the greatest resemblance is to be found. Here we find the same broad windows and four-centred arches as at Adderbury. The sills are moulded with equal subtlety. The jamb mouldings are simpler but very similar in feeling and the bowtells are finished off with little bases, showing the same peculiarity in the minuteness of the bead round the necking. As in the renewed tracery at Adderbury there is a transom of unusual design, finished off with a cresting of finialled cusps. The hood-moulds of the windows are returned in diamond form as in the north doorway in Adderbury Chancel. At Bloxham, as in the Divinity School, the side windows of the Milcombe Chapel have their recesses carried down to form window seats (a most unusual feature in church architecture) and those at the east end are similarly brought down and frame reredoses as at Adderbury. The inner casement-mould is subdivided by a semi-octagonal member, after the manner of those seen in the Divinity School. Though the moulding is not the same, the principle is identical and the semi-octagonal member occurs elsewhere in the Divinity School.

Turning to the work in the aisle, the roof-corbels with their carved heads of royalties, ladies and ecclesiastics are of similar style to those at Adderbury. It is possible that the one instance of the head of a civilian may represent Winchcombe himself (cf. the introduction of the head of a mason in his cap in the chapter house at Southwell) in his "gown of the livery of gentlemen," which by contract the University undertook to provide for him. An internal stone cornice occurs here, as
at Adderbury, and is a very unusual feature. The arches are magnificent, with clustered shafts of elaborate and uncommon type. The bases are of splendid design and those of the minor shafts are of precisely the same delicate contour as those of the bowtell in the Divinity School. The inner mouldings of the four-centred arches are very reminiscent of the great transverse arches of the Oxford building, which Winchcombe probably designed, although he did not complete the vault. The font also shows the Winchcombe feeling in the mouldings of the base and cornice.

At Deddington a large window has been inserted in the south wall of the fourteenth century south aisle to throw light on the side altar at its east end. This is another broad window of five lights with a four-centred arch. The internal and external mouldings are exactly similar to those of the Bloxham windows, with similar bases to the bowtell and the semi-octagonal member is inserted in the casement. The hood-moulding has the characteristic diamond stop and the tracery is treated in the same manner as in the Divinity School and at Bloxham. Internally the window recess is carried down to form a window seat but owing to the lack of height in the existing aisle there was no necessity for a transom.

At Broughton a similar five-light window remains in the same relative position, also inserted in a fourteenth century wall. The tracery is exactly of the Divinity School pattern, allowing for the difference in the number of lights, and although the mouldings are much less complicated than in the other examples, the Winchcombe feeling is evident. Again we find the diamond-shaped returns to the hood-mould. In the same Church there is a tomb recess, much mutilated, in the south wall of the chancel, which has several details in common with the sedilia at Adderbury, notably the usual delicate bases to the bowtell and transoms, decorated with a band of quatrefoils.

Another work which may also be ascribed to Winchcombe is the Wilcote chapel at North Leigh. William Wilcote, the founder of the chapel, died in 1411, so the work is probably contemporary with the chancel of Adderbury. The large four-light windows with four-centred arches have their recesses brought down to form window seats, while the east window has the same delicately moulded contour as at Adderbury. The tracery resembles the restored tracery of Adderbury, suggesting that Buckler may have found fragments of the old tracery in the blocked windows of that church, or, possibly, that he
also noted the resemblance of the North Leigh chapel and adopted its tracery for a model.

The slender bowtell of the mouldings, including those of the mullions, all have bases, which though not identical with any of the other buildings we have noticed, are very similar in feeling, particularly in their very slender necking-bead. There is also a strong resemblance in the treatment of the vaultings shafts to that of the Divinity School. The shafts in both cases are flanked by deep hollows sunk into the wall surface. The altar tomb is much mutilated, but agrees in almost every detail with the reredos at Adderbury, notably in the design of the buttresses, the four-centred arch at the back of the canopy and the bowing forward of the latter on a curved plan, a feature very uncommon at this period.

It is now possible to appreciate Winchcombe's work for it seems as if we could at last associate a series of mediaeval buildings with a master mason whose name we know. Winchcombe was not an architect, as we now understand the term, nor a mere builder, but a combination of both. He not only designed his buildings but he also built them, as a true architect should, and as apparently it was the custom to do, until the architects of the Renaissance preferred to leave the actual construction to others. He was evidently a man of great ability, who had served his apprenticeship in a good school, and the fact that he was employed on the Divinity School, and on very liberal terms, shows that at that time he had achieved a considerable reputation. Later he was superseded by the obviously less-gifted Elkyn which merely proves that then as now the architect of reputation was apt to run his employers into greater expense than they wished to incur. All work which is known to be his or which can reasonably be assigned to him is marked by a fine sense of proportion, combined with a cultivated sense of scale. He excelled in the refinement of the details of his mouldings.

The name Winchcombe suggests that he was born at Winchcomb in Gloucestershire and it seems likely that he served his apprenticeship with the masons employed upon the rebuilding of Gloucester Cathedral. His work is extraordinarily advanced for his time. Without documentary evidence the chancel of Adderbury and the other work which has here been attributed to him might have been assigned to the last quarter of the fifteenth century, apart from the evidence of the corbel-heads at Adderbury and Bloxham. He must have learnt his
trade in an advanced school and at the time the most enterprising and skilful masons were those of Gloucester, who were many years ahead of any other school of mason-craft in England at the time when Winchcombe may reasonably be supposed to have been learning his art. They were pioneers in the use of the four-centred arch and they were the first to work out the Perpendicular system of moulding, fining down the members formerly in use and separating them by wider hollows. To them is due the perfection of a logical system of moulding, in which each member of the pier is designed with a view to the task which it has to perform in the support of arch-mould and vault-ribs. They delighted in the use of small bowtells and loved to provide each with a proper base and capital of its own. They enjoyed playing tricks with their mouldings, making them die into each other and intersect, with the greatest skill and facility. For lightness and delicacy the masoncraft of Gloucester had no rivals at the time.

Now Winchcombe's masoncraft, although not exactly resembling anything at Gloucester, has many of the Gloucester peculiarities. He shows the same delight in delicate mouldings, and although he does not generally provide his bowtells with capitals, it has been seen how fond he is of giving proper bases to even the tiniest of them. Like the Gloucester masons he prefers the four-centred arch to the two-centred arch usual at the time. In the doorways of the Divinity School little arches rise outwards from the capitals of the doorway to intersect with the mouldings of the containing arch. This is just the sort of trick which a mason trained at Gloucester would play. The Gloucester school of masoncraft was the most skilful in vault design and construction in the latter part of the fourteenth and the early part of the fifteenth centuries. It seems likely that the conception of the vault of the Divinity School is due to Winchcombe. It is certain that no one who was not conversant with the vaulting of Gloucester could have designed it at the time.

Though his particular type of tracery is not found in Gloucester Cathedral, it is of a pattern not unusual in Gloucestershire parish churches and in the neighbouring districts of Oxfordshire. The trick of treating the top and the bottom of the tracery lights with a similar pointed and tre-foiled arch, fitting neatly into the cinque-foiled ogee arches of the main lights, is found in many Gloucestershire windows. It is a characteristic local type, though most of the Gloucestershire windows are square-headed. Several of these windows have
a shaft with base and capital to support a figure in the casement moulding of their jambs, a feature which is also found in the outer casements of the windows of the Divinity School, though here the capital is at a higher level than in any of the other cases. Again the design of the exterior of the west doorway of the Divinity School is very nearly allied to the cloister doorways of Tewkesbury Abbey and Gloucester Cathedral, particularly in the insertion of a niche in the jamb mouldings.

If Winchcombe did not learn his craft at Gloucester, the only other really advanced school of masoncraft open to him at that time was Winchester, but his delicate and refined work does not bear the slightest resemblance to any of the work at Winchester or New College, which is marked by boldness of scale and largeness of detail.

F.E.H.

WAGES.

A considerable amount of information is given in these Account Rolls about the wages paid to the several classes of workmen employed, especially in the Rolls for the years 13 Henry IV.–1 Henry V.; 1–2 Henry V. and 2–3 Henry V. in which the rates paid per week for different periods of the year are stated in detail.

Taking first the case of Richard Winchcombe and his apprentice, the two working together and wages being paid to the master for the labour of both, the sums recorded as weekly pay vary from 4s. 10d. to 6s. 1d., these being the extremes. The lowest rate of 4s. 10d. is given in the Rolls for 1–2 Henry V. and 2–3 Henry V. as paid from All Saints Day (1 November) to the Feast of the Purification (2 February), that is, during the three worst winter months. The highest of 6s. 1d. is paid from Easter until Michaelmas (1–2 Henry V.) and also from 1 October till 28 October and from 2 February till 31 August (2–3 Henry V.) It is curious that no less than three intermediate rates are mentioned; 5s. 7d. from 8 October to 1 November (1–2 Henry V.), 5s. 8d. from 18 February to 6 May (13 Henry IV.–1 Henry V.) and 5s. 10d. from 2 February to Easter (1–2 Henry V.) These intermediate rates do not occur in the case of any other worker and I can offer no explanation for them.

In the case of the other masons the two extremes only are stated; 2s. 6d. for the three winter months of November,
December and January and 3s. 0d. for the remainder of the year. The 3s. 0d. rate is given in the three Rolls mentioned before for Reed, Saltcombe, Lawrence, Payn, Renton, Norton, Rudyfer, Cropredy, Day, Newton and Birch, all masons of the better class, for various periods, all of which fall between 2 February and 1 November. The lower rate of 2s. 6d. is given for Reed and Saltcombe, who are the two leading craftsmen after Winchcombe, in 1–2 Henry V. and also for these two and for Rudyfer in 2–3 Henry V. in each case for the period 1 November to 2 February. Young and Clerk are slightly inferior workmen, paid at a rate of 2s. 6d. weekly as a maximum, and in the only instance where one of them, Clerk, has his wage recorded for the three winter months it is reduced to 1s. 8d. Ypewell is intermediate, receiving 2s. 9d. during the period of longer days and light. He is not mentioned as working during the winter. The facts here stated corroborate what has been noticed in other building records, that wages were much curtailed during the days of short light. In the Fabric Rolls of York Minster (Surtees Society, XXXV.) a very interesting set of regulations drawn up for the conduct of masons and other workmen, dated circa 1352, is printed, showing that in winter, which is there stated to extend from Michaelmas until Easter, “lucescente die ad opus suum venient et statim unusquisque incipiet operari.” Work commences at daybreak and continues until sunset, with certain fixed intervals for rest, sleep and meals, which are taken in the masons’ lodge. The variation between winter and summer rates is accentuated in one of these regulations; “item quilibet cemen-tarius minus capiet per septimanam in yeme quam in estate ad valorem unius diesae videlicet a festo Sancti Michaelis usque ad festum Paschae.” This adds the detail that the reduction is to be by the amount of one day’s pay, which is practically what happened at Adderbury. Further it defines the winter period as lasting from Michaelmas until Easter, whereas at Adderbury it appears to include the three strictly winter months only, November, December and January. It is obvious that hours could not be so long in the short days as in the summer period, and this explains the varying rates of payment.

There is here of course no question of the modern custom of an eight-hour day or a forty-four hour week, no commencing at eight and downing tools at five, with a short day on Saturday. There were however many Holy Days, the greater feasts of the Church and the days of special saints venerated in localities, when no work was done, and on Vigils work ceased earlier.
There was at Exeter and possibly elsewhere a custom that these blank days of festivals should be divided equally between workmen and employers. At York the rule was that if there were two Feasts in the week then "amittat unusquisque unam dietam," each workman lost one day's pay; if there were three then he lost the half-week. Frequently the workmen paid by the week were paid in full, even if the week included a Saints day.

There is no trace in the Adderbury records of a division of masons into two classes—mason-hewers and mason-setters—which is found elsewhere, the hewers doing rather more skilled work than the setters. Possibly Young, Clerk and Ypewell, the lower paid masons, receiving less than the standard wage of the Reed and Saltcombe class, who were immediately under Winchcombe, belonged to the less skilled workers.

In the first four Rolls no rates of weekly pay are given. Young, Clerk and Palmer (a mason mentioned only here) are engaged in 9–10 Henry IV. at daily rates, for scappling or rough-hewing stone. Young receives 4½d., Palmer 3½d. and Clerk 3d. daily. In the case of Clerk, where alone a comparison is possible, this is a lower rate than is given for him when engaged by the week. Possibly the work was lighter. Figures are also given in our Rolls for the class of inferior men doing the rougher work, definitely styled "labourers," working under and assisting the masons. In 13 Henry IV.–1 Henry V. Gentleman, Mall, Irish, J. Berewyk, Scott, Colyn, Ash and Loverich are employed from 1 April to 6 October at a daily wage of threepence. In 1–2 Henry V. Mall, Irish, Berewyk and Hunt get a weekly wage of 1s. 8d., Gentleman 1s. 6d. only.

The work done by John Carpenter in roofing the chancel is contract work. He is of course the most important man after Winchcombe and, possibly, the glaziers, who are also employed at an inclusive price. He is however on one occasion, in 1–2 Henry V., mentioned as repairing the "Vernum" at a daily rate of pay, he and his "famulus" each being paid fivepence per day. The "pargetter" (plasterer) works for ten days at fivepence a day. These are fairly high rates, equal to that of Clerk among the masons. Tank's wage for a day and a half while making the "synctor" is sixpence, or fourpence a day. Pay varied possibly according to skill, there is no evidence here of any general "trade union" rate.
"THE PLUMBER'S MATE."

In the matter of wages, as has been seen, considerable light is thrown by the Adderbury Comptus Rolls dealing with the building of the chancel upon mediæval conditions of labour. The general rate of pay was good and higher than that in force before the date of the Black Death (1349-50). The difference is in some ways comparable to that between our rates before and after the "Great War," although not entirely due to the same causes. There is another aspect of labour in the early fifteenth century in which much resemblance may be seen to our modern usages. During the actual building of the chancel most of the special and technically important work such as the roofing and glazing and Winchcombe's making of the "Fenestra Principalis" and his facing of the walls with the parapets etc. was either contract or piece work. The shaping and preparing and setting of the stone used for the masonry was done by the master mason with his apprentice, acting as leader of a band of trained masons, sometimes called his "Socii," mentioned by name in the accounts and employed at stated weekly wages. There are comparatively few instances where mention is made of men employed by the day. In several of these instances however a certain fact is noticeable to which it seems worth while to call attention. Generally it appears that the skilled worker, as distinct from the unskilled labourer, is employed in company with an underling or assistant. The descriptive name used for such an assistant in these Rolls is "servitor," "serviens," "deserviens" or "famulus." In other records, e.g. the Ely Rolls, the name "garcio" or, more rarely, "pagius" is used. The skilled craftsman of those days was, it seems, accustomed to have the help of an inferior worker, who prepared his materials, handed him his tools and generally played the part of the modern "mate." Sometimes the day wage for the two together is stated, often it is shown that the assistant receives a lower rate of pay. Much modern criticism has been directed against the institution which our comic papers call "The Plumber's Mate," the plumber as special instance taking the blame, if blame there be, which might be cast upon the shoulders of all skilled workmen. It is suggested that the custom or institution or whatever it may be called is not after all completely modern and that the fourteenth and fifteenth century worker, where trained skill was in question, was usually
employed in company with a "mate." The instances which occur, in the Rolls here printed or in earlier or later Adderbury Rolls or in other records such as the Ely, York and Durham Rolls, may be classed under three headings:

(I.) A class of labourers, "laborarii" or "laboratores," is mentioned as assisting and working for or waiting upon the skilled men.

(II.) A skilled man is hired and an assistant is also hired to work under or with or for him.

(III.) A skilled man is hired and it is specially recorded that his "serviens" or "famulus" is also hired to work with him.

As to I. the following may be noted.

In 1–2 Henry V. the wages of the masons are stated and then Gentleman, "laborarius," and four others are mentioned as paid for thirty weeks, digging in the quarry and working for the masons, "deservientes eisdem lathamis." Again in 2–3 Henry V. Gentleman and four others are shown as employed for six months on the same job, digging in the quarry and working for the masons. In 3–4 Henry V. various (unnamed) labourers are hired for the same period as the masons, "deservientes eisdem lathamis predictis," waiting upon or working for them. Exactly the same fact is recorded in 4–5 Henry V., the names of the labourers again not being stated. So too in 5–6 Henry V. In all these cases of course the wages of the labourers are much lower than those of the masons. They are all taken from the Rolls here printed, but there are numerous other cases elsewhere to which reference could be made.

For II. evidence appears in earlier and later Adderbury Rolls.

In 10–11 Richard II. Cooper, a carpenter, and Wilot, a mason, are hired for work on a set of rooms in the rectory and Anot, a labourer, and one Aubrey are hired at lower pay, "pro dicto carpentario et cimentario auxiliando et deserviendo," for helping and waiting on them. In 11–12 Richard II. a thatcher is hired by the job and a "serviens" is also employed at a low rate of pay. During the building of the chancel there are no instances to quote under this heading.

8–9 Henry V. contains an entry: "In i coopertore conducto cum diversis famulis eidem deservientibus pro grangia de novo cooperienda ad tascham xiiiis. iiiid." In 11–12 Henry IV. a slater is hired for sixteen days to re-tile and mend the roof of the brew-house at sixpence a day and a labourer is also hired for the same time at fourpence daily "eisdem slatiero in dicto opere deserviens."
30–31 Henry VI. Eleven shillings is paid to a slater covering the grange and malthouse and hired for twenty four days at a daily wage of 5½d. and six shillings is spent “in uno sibi deserviente per idem tempus” at a daily wage of threepence. 37–38 Henry VI. A mason works for twelve days making a stone wall at a daily wage of fourpence and a labourer is hired for the same time “sibi ad deserviendum” at a daily wage of twopence. Each receives in addition his board (mensa), the “lathamus” at the rate of twopence daily and his assistant, “suus servien,” at the rate of three halfpence daily.

In the Sacrist Rolls of Ely the following instances occur. 15–16 Edward II. “cuidam prosternanti domos et muros etc. per i septimanam ad mensam Domini,” 8½d.; “cuidam gercioni ipsum auxilianti” for 1½ days, 1½d. 17–18 Edward II. “In vadiüs Johannis Pictoris etc. prō pictura ymaginis magne cum stipendio unius gercionis auxiliantis.” Further: “In stipendio cujusdam auxiliantis Plumbarium.” 10–11 Edward III. “In stipendiis trium cementsariorum per v septimanas quilibet capiens per septimanam xxd. £1 5s. 0d.” “In stipendiis operariorum deservientium eisdem per idem tempus 11s. 2d.” Also: “Solutum Willelmo de Bramptone vitrario pro etc. per vii sept. capienti per sept. xd. et ad mensam Domini 6s. 8d. solutum i gercioni eidiem auxilianti capienti per sept. vid. et ad mensam Domini etc.” 15–16 Edward III.

Robert de Wirsingete (a mason) is paid for eighteen weeks at twenty pence a week and has further an allowance of a halfpenny weekly for drinks for fifteen weeks and Robertus de Hengham is paid for thirteen weeks at eightpence weekly “serviens dictum Robertum in ponendo.” 28–29 Edward III. John Tegulator (the tiler) is paid for four and a half days at sixpence daily and “garcius ipsum deservientes” is paid for the same period at threepence a day. Also Colhop (a mason) is paid at fourteenpence weekly and two “garciones illum deservientes” are paid at a lower rate. These examples will suffice under Heading II.

Under Heading III. the examples quoted are all of cases in which the skilled worker in question is accompanied by a servien, servitor, famulus, garcius or pagius who is usually described as his particular assistant and it seems that in each of them he brought with him his own special “mate.” 10–11 Richard II. John Cooper carpenter “et serviens suus” are hired for seven days for certain work taking between them sevenpence daily, probably the master fourpence and the man threepence. So too Ralph Slatter is employed “cui suo
"THE PLUMBER'S MATE."

deserviente" at eightpence daily "pro se et serviente." 11–12 Richard II. Slatter is again hired with "serviens suus" at sevenpence daily for the two. In 17–18 Richard II. a thatcher is hired "cum suo serviente" for certain repairs. And again in 19–20 Richard II. a thatcher is hired "cum suo serviente."

The following are instances occurring during the building of the chancel, and in each case the employment is by the day for special jobs, hiring during that period being usually, as already stated, by the week or at a contract price. 13 Henry IV.–1 Henry V. Paid 2s. 6d. "Gylkes (the local carpenter) et famulo pro Bayard etc faciendis." In 1–2 Henry V. there is an entry of 4s. 9d. paid to John Carpenter, the head man employed on the roof, "et famulo suo laborantibus circa reparacionem verni," each receiving fivepence daily. Carpenter was in this year paid part of his contract price for the roof and seems to have put in a short spell of work, specially paid, on the defective windlass. In 6–7 Henry V. 2s. 6d. is paid for three days work on the staircase to the bailiff's rooms to the local man, John Gylkes, hired "cum famulo eidem deserviente," the two receiving between them tenpence daily.

During the Henry VI. period there are the following cases. 14–15 Henry VI. A slater is paid the considerable sum of £3 6s. 8d. for contract work, finding all laths, lathnails and chalk, and is hired "cum suis servitioribus." 26–27 Henry VI. A slater is hired to repair defects in the house of the swineherd etc. for sixpence a day and his assistant, "suus famulus," is hired at fivepence a day. 29–30 Henry VI. Tenpence is spent "in uno plumbario cum suo famulo conductis per i diem ad reparandam antiquam guteram."

The Sacrist Rolls of Ely provide many instances under this heading. 16–17 Edward II. "In stipendio Henrici de Waltone (a carpenter on the sacrist's staff) operantis super dormitorium per i septimanam 1s. 2d." "In stipendio Willelmi de Overe garcionis sui auxiliantis ipsum 8d." Further "In uno coopertore conducto cum garcione suo ipsum auxiliante per xii dies," also "In stipendio Johannis Vitrarii per annum ex convencione £1," "In stipendio Simonis garcionis Vitrarii per annum ad mensam Domini 4s. 0d." 17–18 Edward II. "In stipendio i arundinatoris cum garcione suo ipsum deserviente etc." and "In i coopertore conducto pro capella cooperienda per iii dies cum stipendio garcionis sui capiente per diem 6d." 15–16 Edward III. "Item datum uni arundinatori cum garcione suo per xx dies capienti per diem v½d."
(They also cost sixpence for occasional drinks.) Also "Datum Waltero garciioni pictoris iiis." 19–20 Edward III. "In garniamentis emptis pro pagio plumbarii etc." And "In i coopertorio conducto cooperiente super Grangiam per viii dies cum garcione suo per diem 4½d." Again the large sum of £3 is paid "Rogero carpentario pro vi campanis pendendis cum garcione et equo ejus ad mensam Domini." 26–27 Edward III. 8s. 0d. is paid "Johanni le Redere operanti super dormitorium per xxxii dies operabiles per diem iiid. preter mensam," and 2s. 4d. "garcioni suo per xxviii dies per diem id. preter mensam." Further, "Datum plumbario pro cooperatione novi campanilis ex convencionebtc. £10." "Datum garcionibus suis ex curialitate 2s." Here the plumber brings and pays his boys or mates and the sacrist thinks them deserving of a tip.

Two further cases may be quoted from other sources, York and Durham, each from an entirely different district. In the Fabric Rolls of York Minster (Surtees Society, XXXV.) in 1356 appears the entry: "In stipendiis Petri Plumber operantis per v septimanas xvs." i.e. three shillings weekly; "In stipendiis sui servientis operantis per ii septimanas iiiis." i.e. two shillings weekly. Durham Account Rolls (Surtees Society, 1900, I.) 1456. "Et solutum Willelmo Usworth cum famulo suo laborantibus super facturam muri ubi carbones ponuntur xis. iid."

Similar evidence appears in "The Building Accounts of Kirby Muxloe Castle, 1480–1484" (edited by A. Hamilton Thompson, F.S.A.) from which the following cases may be quoted.

A slater is hired at sixpence daily and slaters' "servants" at fourpence a day each. In several cases "Brekeleyers" are hired at a daily rate of eightpence or sixpence, a "Trowel man" at sixpence and "servants" at fourpence each, "for their services to the said Breke men." Frequently it appears that masons or rough masons are hired at sixpence daily and labourers "serving the said mason" at fourpence.

Carpenters are usually accompanied by their apprentices but occasionally there is an entry of the name of a man "serving" the carpenter.

Again after mention of freemasons paid fivepence daily and a thatcher paid also at fivepence two men are noted as employed at threepence "serving le Thakere and ffremasons."

At Kirby Muxloe there was a considerable employment of bricklayers.
It is not of course suggested that it can be proved that in every case where a skilled workman was engaged he was accompanied by his "mate." But the evidence certainly shows that often this was so. The instances quoted include the mason, the carpenter, the Slater, the tiler and also the Thatcher and the reed-thatcher (the latter in the marsh country of Ely) and the plumber. The *Ely Rolls* extend the list by including the painter. The statements on this matter in both the *Adderbury Rolls* and the *Ely Rolls* are frequent and spread over a considerable period of time in the Fourteenth and Fifteenth Centuries. The number of Comptus Rolls hitherto printed which deal with building operations is not very large and further research may produce further evidence. These entries deal with a detail of mediaeval labour which has not, it is believed, hitherto been noted. It is not perhaps of primary importance, but certainly it is not without interest at the present time, when attention is generally directed to conditions of labour.

**MEDIAEVAL ACCOUNTS.**

The Comptus Rolls here printed and similar accounts of the period call for some explanation and comment, for, as will be observed, they differ in many important particulars from those to which we are accustomed.

The Adderbury Rolls are of course in writing and they are written upon strips of parchment of an approximate breadth of some ten inches, but of length varying with the volume of the account. Where this is considerable a long strip of parchment is used, or two shorter strips are joined together by sewing. They are invariably written in Latin. Each account is a cash account only, as might be expected, for the method of bookkeeping by double entry was not introduced into England from Italy until the Sixteenth Century and at this earlier date the use of the ledger was quite unknown. We find therefore merely a statement of cash receipts and expenditure during the period of account.

In form every account presents us with a series of paragraphs, the title or heading of each of which is written in the margin. The first paragraph states the name of the person rendering
the account and the period for which it is rendered, this period being computed from the day after some well-known saints-day (at Adderbury this is the Feast of the Annunciation of the Virgin\(^1\) or 25 March) until the corresponding saints-day in the following year "per unum annum integrum." Regnal dates are used for the years and not those of the Christian era, although the latter are frequently used in deeds and other formal documents of the period. In the margin of the first paragraph is written the name of, for instance, the manor for which the account is rendered. The first paragraph of the account proper states the arrears, if any, brought forward from the previous year, which are taken as being paid during the year of account. The marginal title for this is "Arrearagia." The other headings of receipt then follow in successive paragraphs, each having its title entered in the margin (e.g. "firma") for rent or "receptio forinseca," foreign or outside receipts or, as we say, sundries) and each having its total or "summa" stated upon a separate line at the end. Finally at the end of the receipt portion of the Roll, the sum total of all arrears and receipts for which the accountant is held liable is given in larger letters and upon a separate line under the title "Summa Totalis Receptae cum Arreragis." Various forms of the word for receipt seem to have been used, for instance Recepicio or Recepta (fem. sing.) and also Receptum (neut. sing.).

The remaining paragraphs deal with expenditure, items being grouped under more or less appropriate marginal titles. Here too each paragraph has its "summa" neatly stated at the end upon a separate line. Amounts paid over on account to the representatives of the person or body entitled to receive them, (at Adderbury the College bursars) follow and finally the sum total of expenses and payments is given in larger letters. When expenses are less than receipts a balance is shown as due under the title, "Et debet" (he owes) so and so much. In some of the Adderbury Rolls a further deduction is here made under the title of "Allocacio," for sums "allowed" for certain new or omitted items, apparently not settled until the date of the audit, and this is followed by the statement of another result under the title "Et debet de claro," (he owes clear or in full). When expenses and receipts are equal nothing is due and this is shown by the words "Et quietus recessit," (he departed quit). A balance due to the accountant, where expenses have exceeded receipts, is brought forward in the

\(^1\) At that date regarded as the commencement of the official year.
following account at the head of the expenses. These two last cases do not occur in the Rolls printed here.

Two essential differences between these accounts and our modern forms will at once strike the reader. The first, and perhaps the most important, is that the mediæval roll observes a narrative form for the entry of items under each heading. These items run on and follow one another, each of them frequently occupying a portion of a line of writing only and not necessarily filling a whole line. As the amount of cash concerned in each item is given at its conclusion, the result is that the figures for money appear at any place in a line to which chance brings them. A modern cash account is drawn up in columnar form. Each item is commenced upon a new line on the left-hand side of the page and its money value is set out on the right-hand side in the column reserved for figures and underneath the figures of the previous item. This, as it seems to us, convenient arrangement allows the figures to be added up with ease, the method of reckoning by means of nine digits and the zero being employed. The use of this method is however entirely foreign to the mediæval account. The second difference is that the figures used, whether for money values or for quantities, are invariably Roman and not Arabic numerals. This made the work of the accountant in fact easier as long as the counting-board or abacus (described hereafter) was employed for calculations instead of the modern method of computation by nine digits and the zero.

In form these mediæval accounts are more picturesque and agreeable than those now in use. It is however extremely difficult for us to understand or to test them. The long narrative paragraphs in which the items are set out with their Roman numerals would be useless to a modern clerk engaged in the simplest process of calculation and he would have to re-arrange the items and set them out in column form, using Arabic numerals. The explanation of these differences is simple. Taking the last, Roman numerals were used because for practical purposes no other numerals were used or known. It is perhaps not generally realized how late was the introduction into England of Arabic numerals. The earliest examples of their use in this country appear to date from the last quarter of the Fifteenth Century, although they had been commonly employed abroad long previously. The first book—by John Mellis—in English dealing with the then new Italian method of book-keeping by double entry was only published in 1546 and it was not until that method came into general use that Arabic
displaced Roman numerals in accounts and other documents. Even then the earlier forms did not entirely disappear and until a much later date, especially in private and local accounts etc., the two sets of figures were used indifferently or were mixed together, just as the new Italic form of handwriting was used indifferently with or mixed with the old "Secretary" hand. Even long after the adoption into common use of Arabic numerals it is quite usual to find in dates, that the year is stated in Arabic figures (the use of the regnal year for year dates having been discontinued with the close of the Middle Ages) while the day-date is given in Roman numerals.¹

The ordinary mediaeval account is to all appearance easy and readable, but in this respect it is fraudulent, for the difficulties of addition and subtraction which it presents seem insuperable. The accountant however found no hardship in it, for he never attempted to reckon by our modern methods. Sometimes he took his Roman figures and set out in the margin of his Roll or upon a separate parchment the c's, x's, v's or i's by means of separate pen-strokes and then worked out the totals. Signs of such workings are not uncommon. But it is probable that in most cases, certainly during the period of the Adderbury Rolls, he employed a method of reckoning which came into use in France early in the Thirteenth Century, and which spread thence rapidly to England. This consisted in arranging "Casting Counters" or "Jettons" upon a plain table, known as a "Counting Table," which was ruled with a few horizontal and occasionally one or two vertical lines, cut in or marked with chalk. On such a board the counters were credited with a numerical value in strict accordance with the position in which they were placed upon the lines or upon the spaces between the lines. Thus a counter placed upon the lowest line represented the smallest unit of computation, say one penny, the line above it being used for the next lowest unit, say one shilling, the next for pounds, the next for twenty pounds, the next for one hundred pounds and so on. The intermediate spaces were used for counters representing one half in value of the unit upon the line above them, e.g. sixpence, ten shillings, ten pounds, fifty pounds and so on.

¹ The subject, including a full examination of the actual forms of the Arabic numerals first used, has been fully treated by Mr. Hilary Jenkinson, F.S.A., in an article in the "Antiquaries Journal" for 1926 on "The use of Arabic and Roman numerals in English Archives," to which my readers are referred for detailed information.
When six counters accumulated on the lowest line they were removed from the board and replaced by one counter (for sixpence) in the space above it. Similarly when two arrived in this space they were removed and replaced by one (for one shilling) on the next higher line. When ten arrived there they were removed and replaced by one in the ten-shilling space above. And so in succession. With small mercantile accounts, such as the Adderbury Rolls, where the grand totals practically never exceeded one hundred pounds, five lines with their intermediate spaces would suffice for addition and subtraction, the two processes most generally required. The method served also for multiplication and division, but the working was difficult and slow. The use of the Counting Table was general in England from the middle of the Fourteenth Century until about 1700, when it seems to have been disused. Thus Chaucer in “The Shipman’s Tale” (1385–1400):

“His bookes and his bagges many oon
He leith before him on his counting board.
Ful riche was his tresor and his hoard.”

Alan of Walsingham among his buildings at Ely put up “camera quaedam cum mensa quadrata ad calculandum,” and mention is frequently made during this period of such tables in the inventories of wills; cf. Riley “Memorials of London,” p. 200, where the table is called a computatorium. Other names found are countour, cowther, chequer or scaccarium, the crossed lines giving a resemblance to a chess board. The number of counters used for simple accounts was seldom over one hundred, often only fifty, and a set of counters was known as a “jet” or “cast.”

The scribe or clerk is supposed to have attained great dexterity and quickness in the use of this method. It is however obvious that errors might easily arise through the accidental misplacing of a single counter, and in later times it was thought that the celerity of this “manual arithmetic” was much overestimated. In Palsgrave’s “Eclaircissement de la Langue Francaise” the statement is made “I shall reckon it syxe times by algorism (i.e. ciphering) or you can cast it ones by counters.” In 1646 those who could “only cast with counters” were described by a contemporary writer as ignorant and the 1699 edition of Recorde’s Arithmetic omits the chapter on manual reckoning which had appeared in earlier editions. Manual arithmetic was entirely associated with Roman numerals and as these were gradually ousted by Arabic figures the system was disused.
Few examples of the Counting Board have survived. In its nature it was perishable, being merely an ordinary table, the top of which had received special treatment by being lined or chalked. After disuse it may well have been applied to ordinary domestic purposes. Three are preserved at Basle, all of the Sixteenth Century, and one at Nuremberg of a later date. Munich possesses five reckoning cloths, prepared for laying over a counting table, three dating from the Sixteenth and two from the Eighteenth Century. The table with its lines and/or squares is shown upon some of the many counters preserved. The best evidence as to its actual use comes from some five and twenty illustrative woodcuts in books, mostly dating from the Sixteenth Century.¹

The use of the narrative form in account-keeping is peculiar. It is possible that the form adopted in the national accounts, which may have arisen from the fact that the clerks at the Exchequer table took down in writing items dictated to them by the officials in a species of narrative, set the example for all other forms of account. Or again it may have arisen from a desire to reduce the space required for the account and so to effect economy in parchment, which was expensive. The space is certainly reduced, although the task of dealing with the figures is made more difficult. The form seems to have been universally employed with unimportant exceptions. In some cases receipts were arranged in columns. This seems to have been done at Ely and in the New College Bursars' Rolls for the same period as the Adderbury Rolls now printed the incomings from the College manors appear in columnar form, the name of the manor on the left of the Roll, its contribution on the right. In these Bursars' Rolls an advance is also made in dealing with expenses, as with some of these, for instance the commons of the several classes of College inmates, the total for each division is stated—not at the end of the paragraph but —on the right-hand side of the page and in a column with the other totals. But with few exceptions the awkward narrative arrangement appears to have continued throughout the Middle Ages and was not displaced until a more scientific method of book-keeping was adopted.

It is to be observed that the marginal titles attached to the paragraphs of these accounts contain at least the essential

¹ A complete description of the method is given in the monumental work by Mr. F. P. Barnard, F.S.A., on "The Casting Counter and the Counting Board" (1916).
elements of a more advanced system; that is to say that the items of receipt and expenditure are grouped into classes, imperfectly and uncertainly it is true, but still in such a way as to enable us to construct from them a ledger, in which they can be entered under their appropriate headings. Bookkeeping by double entry was still to come, but the method is at least indicated, in what is only a cash account, by the attempt at classification. It is possible, as may be gathered from the eleven years account given on pages 24 and 25 to arrive at the sum total of expenditure (and the remark also applies to receipts) upon any special work of repair or construction, or, in ordinary manorial accounts, upon details of farming, etc., by extracting the descriptions and amounts concerned and entering them in their proper places in an ad hoc ledger. This fact may be noticed in other accounts of the period such as those of Ely and of the Abbey of Abingdon.

In the Adderbury Rolls the marginal titles are not numerous. They are however frequently deceptive and care must be exercised in grouping the items. For instance the first four Rolls have a special heading of "Novum Edificium," clearly referring to work upon the new chancel. This title then disappears and the chancel expenditure is set out under other titles, mainly "Purchase of stores and other requisites" and "Wages." Even under these it is possible to pick out various small items which are unconnected with the chancel. Further one has to be on the look-out for what is obviously chancel work under titles such as "Expense custodis cum alis expensis forinsecis" or "Custus carectarum" and so on. An instance of thoroughly bad classification is to be found in the Roll for 5–6 Henry V. which presents us with a long paragraph of expenditure headed "Custus domorum et empicio stauri." Normally this would contain only ordinary works of repair upon buildings and other items quite foreign to the construction of the chancel. The first and the last three of the items are in fact of this nature but they cover only £3 6s. 10d. out of the total "summa" of £24 19s. 7½d. recorded. The remainder of the amount spent—£21 12s. 9½d.—is for chancel work. The scribe or accountant was most unsystematic and uncertain. His intention was good but want of care, time or flexibility led him to enter under any one title items, possibly forgotten or omitted by chance in writing the Roll, which properly demanded an entirely different title. "Recepte forinsec" or "Soluciones forinsec" (foreign or outside receipts or expenses) was clearly to him a convenient dump into which
could be shot items, which did not seem to fit in elsewhere. It is of course useful as a title and we should probably employ it under the name of "Sundries." He makes quite a different use of it.

Bad classification is a fault which might have been avoided if accounts had been prepared by professional experts, supplied with details and explanations but arranging items according to their own ideas. It is clear that this was not the case. In all probability the accounts were prepared by the bailiff, John Berewyk, a member of a fairly numerous class in those days. He was paying a "firma" or rent for the incomings which I estimate at something over £1600 yearly in present values. He was probably what has been called a "laicus literatus" a layman with some knowledge of letters, sufficient to enable him to use straightforward Latin and to prepare a simple cash account. His attempts at classification were unscientific, but as regards figures it seems as if he were assisted by some skilled official of the College. It is evident that there was an audit of his accounts conducted by someone in authority. The day of account was probably a solemn occasion, at which figures were scrutinized and items vouched, often in the presence of the Warden himself. Throughout these Rolls there is constant reference to "papers" or "parcelle" (bills of particulars) produced for the verification of special items. Sometimes the "paper" is that of the Controller or the Supervisor of the work. In all cases the author was examined and the "paper" "proved." The expenses of the Warden are always vouched by "sealed bills." In the first four Rolls cash is paid over to the Bursars at the time of rendering the account, "super reddicionem compoti." Further than this there is special reference to an audit, under that name. Thus in 12–13 Henry IV. there is an item which reads: "Et in soluto diversis lathamis etc. pro petris scaplandis ad edificacionem cancelle ut patet per parcellas Johannis Berewyk in presencia Domini Custodis inde examinati super audicionem compoti istius (et) probatas," £7 17s. 9d. that is, as appeared by the particulars produced by John Berewyk on his examination in the presence of the Warden at the time of the audit of this account. So too in an earlier Roll—10–11 Richard II.—we have the expression: "Et in expensis Magistri Nicholai Wykeham et aliorum existencium ibidem per ii dies pro curia tenenda Rectoria supervidenda et compotis ejusdem et aliorum manerlorum in patria audiendis." The use of the verb "audire"
with its compounds was, it seems, at this time accepted in our sense of "audit."¹

There is an interesting example of strict and correct auditing in the Roll for 19–20 Richard II. This contains a long paragraph headed "Custus domorum cum necessariis," with eighteen items, two of which are as follows:

Et in soluto diversis laborariis conductis pro ecclesia de fimo purganda ac eciam cum stramine et herbagio distribuenda per ix annos proxime elapsos viz. pro quolibet anno iis. iiiid. xxis. Et in expensis dicti Johannis Berewyk (the firmarius) differentis denarios firme sue ad Collegium in Oxon. per predictos ix annos viz. pro quolibet anno iis. xviiiis.

These two items are struck out, a line being run through all words and figures. The "summa" stated at the end of the paragraph—£4 17s. 5d.—is quite correct for the total of the sixteen items not struck out but does not include the sums of 21s. 0d. and 18s. 0d. above shown. There is no sign of an erasure in the figures of the total and it seems clear that these were inserted at the time of audit and by the person auditing. The "total" seems to be written by another hand, as both the "s" and the "d," for shillings and pence, are differently framed from those used for items within the paragraph. This suggests that the account as a whole may have been prepared by or for Berewyk and the spaces for the totals left blank until the audit, additions being left to the auditor, who inserted the totals when ascertained by him by means of a counting board. Here there was obviously a "try-on" on the part of Berewyk. It occurred to him as a good idea to see if he could not charge the College with a yearly something for his expenses in riding to Oxford to pay his rent, also that he might possibly work in a charge for cleaning the church. He tried to bring in both for nine years back, that is from the date of the earliest Roll preserved and presumably from the commencement of his tenancy. The auditor was too sharp for him and knew his law. A tenant, if so required, could be compelled to seek his landlord and pay his rent and the cleaning of the church was the affair of the parishioners. The attempt failed and was not repeated.

¹ Professor A. Hamilton Thompson, F.S.A., refers me to its use in connexion with the visitations of monasteries, quoting the phrase: "injunctum est priori quod providat de auditore qui secundum legem auditorii audiat computos monasterii," used in 1442. At a later date "audicio" is frequent; cf. Lyndwood on the accounts of executors (1679 edition) "quantum licet recipere pro computi audizione," etc.
The Adderbury Rolls leave little to be desired in the matter of correct arithmetic. The totals of receipt and expense, as taken from the figures given at the end of each paragraph, are stated with exactness, and in the whole of the accounts for eleven years which have been run together there is only one small error of one farthing (see 3–4 Henry V.). It cannot be said that the "summa" at the end of every paragraph is absolutely reliable. Errors do from time to time appear, especially in the accounts for wages, and these it is impossible to correct. The explanation of their existence may possibly be that the figures inserted are in the great majority of cases based upon special accounts of particulars produced at the time of audit, from which the figures were vouched. These have not survived. It may well be that they contained explanatory details as to non-working days, such as feast-days, which threw light upon apparent discrepancies. On the whole the working out of the figures is impressively correct.

The Latin, in which these Rolls are written, is the language common to all manorial documents until a much later date. Classical Latin had been compelled to become in some ways more flexible and to admit a very large element of words of later formation, in order to express medieval facts and ideas. So that Mediaeval Latin needs its special dictionary to explain such words as "merennim" for timber or "ad tascham" for by contract or by the job. It will also be noticed that frequently the scribe has not found it possible or worth while to obtain a Latin word for his materials, etc. He takes the ordinary English word such as lath, lathnail, sling, crow, cable, etc., and uses it with a slight change of form. Probably he neither knew nor was at all wishful to find any exact classical equivalent. Both his auditor and he knew what was intended and that was enough. Occasionally there is a quaint use of the French definite article, thus the windlass often appears under the title of "le vernum," and we have such expressions as "le scaffold," "le flore," etc. It is curious to find the "fenestra principalis" mentioned in the first two Rolls appearing in the fourth under the title of "le Gabilwyndowe." Clearly an expression might be used which served the need of the moment without any feeling that the formality of the Latin suffered.

The Latin words used seldom appear in their full form; they are almost always contracted and the scribe is not in every case careful to employ the accepted symbol for contraction.
Hence there is occasionally a doubt as to the exact interpretation. But on the whole the language is clear and the meaning free from doubt. In order that the difference in form between these Rolls and a modern cash account may be brought out I have arranged the items in two of the most important Rolls, those for 1-2 Henry V. and 2-3 Henry V., in modern form, submitting in each case a translation of the matter.

Note.—It will be noticed that although the Account year in the Rolls printed runs from 26 March to 25 March, many of the items for wages (and occasionally other items) run from October until the following August, Michaelmas or October. In the second, third and fourth Roll it is stated that the account was "rendered" once in September, twice in October. It seems therefore that, although the year for the account finished at Lady Day, nevertheless items running in date up to the following October, might, if ascertained, be included at the time of audit.

£109 11 1 ½
CONTROL AND SUPERVISION.

The Comptus Rolls show that the College carefully supervised the work of building. During the first four years expenses were small, averaging about £13 yearly only, and purchases and payments were made through Berewyk, the Bailiff, his accounts being vouched by the production of a day-book or wage-book kept by him described as “papyrium,” “papyrium de parcellis” or “parcella.” He had evidently to show a written register of outlay as to which he was examined, sometimes “in presencia Domini Custodis super audicionem compoti,” and which was passed after scrutiny. In some of the later Rolls (under Henry VI.) expenses were vouched by the production of “tallies.”

In later years expenses were far larger, financial supervision became more important and the names of special representative officials of the College appear. These are (1) William Mownter, who was a member of the College until 1418 and vicar of Radcliffe, some fifteen miles from Adderbury, in 1412-1413. (2) John Love, who was vicar of Adderbury from 1415 until 1426 (both had served in the office of Bursar) and (3) John Monk, who was vicar of Adderbury before 1415. In 13 Henry IV.—1 Henry V. none of the payments are vouched by written particulars, but Mownter is noted as being resident at Adderbury for sixteen weeks and as riding to Teynton and Wychwood to make purchases of material. During the next year, 1413-1414, he was again resident for fifteen weeks and produced his “papyrium,” giving details of several of the larger lump sums paid. He was paid 16s. 1/2d. for his services during the past year. In 1414-1415 he is referred to only as receiving 13s. 4d. for his services during the past year and by the words “per W.M.” placed after the mention of the detailed account of the “contrarotulator operis,” possibly rendered by him. At other places, e.g. York, a Comptroller appears as one of two clerks appointed by the Chapter to keep accounts, from whose roll that of his colleague was checked. After this William Mownter disappears and even in the Roll for this year two payments are recorded as being made “per Johannem Love,” the new vicar, who takes over control. In the next year—1415—1416—Love is called “supervisor operis” and in that and the two following years presents his “papyrium” to vouch
the details of expenditure. In 1415–1416 he received twenty shillings for his services in connexion with the supervision of the work.

John Monk is mentioned once as "supervisor operis" in connexion with a sum of 20s. 0d. respited or held over (not printed with the Roll) which he stated that he had paid to Richard Winchcombe but of which the Warden had no knowledge. This is set right in the succeeding Roll for 5–6 Henry V. where the 20s. 0d., "quos Mag. J. Monk dicit se solvisse," are allowed. The whole of this supervision, however thorough, seems to have been financial only and not in any way technical.

THE CHANCEL BEFORE AND AFTER RE-BUILDING.

In the deed of endowment of the Vicarage the repair of the chancel and any re-building needed and also the repair of the vicar's house were excluded from the list of duties incumbent on the vicar. From the commencement there are records of repairs done to the buildings of the "Rectory," as it was still called. The important decision to rebuild the chancel was taken and the work was commenced in 1408 but before that date the Comptotus Rolls show that defects in the fabric were constantly attended to.

In 11–12 Richard II. all loose glass in the chancel windows was made secure with iron bars and in 16–17 Richard II. a special heading of "Custus Cancellae" reads: "de quibus compotat in xii gemeux et clavis emptis pro dextis in Cancella perficiendis iis. vid. Et in xii tabulis emptis pro dictis dextis super terram tabulandis xviid. Et in clavis emptis ad idem iiid. Et in meremio empto pro cathedris dictorum dextorum faciendis iis. id. Et in arcubus ferri emptis pro eisdem iiiid." This evidently refers to the choir furniture. The "desks" mentioned are hinged and boarded underfoot and timber is bought for making the stalls, possibly the seats or misericords, for the desks. The "bows of iron" may be hooped pieces of iron within which the seats move up and down.
A heading of "Custus Vestriarii" in 21–22 Richard II. records £2 18s. 7d. as spent upon repairs to the sacristy. A mason is paid 16s. 8d. for the job of making a new wall and two windows, himself finding the stone; ironwork for the windows costs 10s. 8d., the walls are plastered, lead is bought for fixing the window-irons into the walls and finally "Thomas Glasier of Oxford" receives 13s. 4d. for glazing three windows in the sacristy and one over the altar and for mending windows in the chancel. This is evidence that at that date there were glasiers in Oxford, which was not a well-known glass-making centre, who had some reputation. It may be therefore that the unnamed workmen who glazed the new chancel sixteen years later were Oxford craftsmen.

In 5–6 Henry IV. as much as £3 was spent in the purchase of six oaks for making beams for the chancel. Possibly much of the wood-work was rotten and this large outlay may have brought up the question of entire re-building, which commenced three years later.

Expenditure did not however cease with the end of the re-building. Only a small expense is recorded for the leading of the roof in the Rolls now printed, but the work was more thoroughly done in 7–8 Henry VI. (1429–30), when the large sum of £10 was paid to a plumber "pro cancella cooperienda ad tascham cum exibucione plumbi et fusione antiqui plumbi," the old lead being melted and used and new lead provided. In the same year a carpenter was paid for making a door "in superiore parte Assensorii ad plumbum cancella," at the top of the stairs and giving access to the leads, and also for a lock and keys to it. In 10–11 Henry VI. (1432–33) the Warden made a present of 6s. 8d. for glazing the sacristy, which is brought into the expenses of the year and therefore paid for by the College. During the following year ten shillings were paid "pro pictura imaginis Sancti Johannis in cancella," for painting the statue of St. John in the chancel. Six years later a present of £2 was made to the parishioners towards church works and £2 13s. 4d. was spent "pro factura stallarum et sedilium," on making the stalls and sedilia, and in 23–24 Henry VI. (1445–46) the College in its charity provided bells at a cost of £2, paid "ad ecclesiam de Adderbury ex elemosina Collegii pro campanis ibidem emptis." The capital outlay upon the chancel during the reign of Henry VI. amounted therefore to well over £500 in modern values.

Generally relations between the College and its Bailiff and the parishioners seem to have been cordial. During the reign
of Richard II. the "firma" paid by Berewyk was twice considerably reduced on account of the low price of corn and 30s. was allowed to him "for his services and goodwill," and on one occasion a gown was bought for him, costing 6s. 8d., because he was in superintendence of certain workmen repairing the Rectory.

Representative parishioners were entertained at repasts. Thus in 15-16 Richard II. there is an entry of 5s. 8d. for the expenses "Magistri Johannis Monk venientis ad predicandum quarta Domenica Quadragesime unacum expensis aliorum validorum parochianorum cum eo comedencium." In 18-19 Richard II. the entertainment is graced by the presence of the Warden and 8s. 2d. is spent, "in expensis Domini Custodis existentis per ii dies mensis Septembris pro Rectoria supervidenda unacum expensis xvi hominum de melioribus tocius parochie secum comedencium." The "most substantial" or the "best" of the parish were selected for invitation. On other occasions the charges include alms to the poor. Thus in 2–3 Henry IV. 2s. 10d. is paid for the expense of the Warden and Master J. Stone staying at Adderbury to inspect the state of the "Rectory" together with the cost of four parishioners eating with them "cum pecunia data diversis pauperibus," and in 5–6 Henry IV. the Vicar of Swalcliffe is invited and 4s. 8d. is disbursed for the cost of the Warden, Master Robert Shurbarn, their guest and ten parishioners eating with them and for alms to various poor parishioners.

**LATER BUILDING.**

A considerable sum was spent upon new building within three years after the completion of the Chancel, in the years 1421–22 and 1422–23, the total cost being about £86. The details follow, the Rolls having been curtailed in order to include only the relevant items. It is not easy to ascertain exactly what the building erected was, but the facts seem consistent with the construction of the great tithe-barn. There was however evidently a complex of buildings connected with it as mention is made of a kiln, a bakehouse, a pig-house or shelter and also a sheep-house or shelter. Labourers were paid a large sum for digging stone in a quarry and smaller amounts for
digging the foundation. William Mason or William “Latha-
mus” received in the two years the sum of £20 5s. 4d. for
making the walls with seven buttresses. The measurements
stated (17½ perches) do not coincide with the actual length of
the walls of the existing barn, but it is obvious from inspection
that much alteration and reconstruction has taken place since
the original erection. Possibly it was found that, after tithes
ceased to be collected, the barn was too large for any purpose
for which it could be utilized and that it was shortened. The
total charges of the local carpenter, John Gilkes,1 who was
employed for the general work of carpentry, amounted to over
£26 and the slater, John Badby,1 was paid £6 for the slating
of the roof. Apart from these notices and a reference to
lead for making a rather expensive gutter and to certain hinges
bought it is difficult to gather information of the nature of the
building which is nowhere described by name. Implements
were purchased including a pick, a sieve, two wheel-barrows,
shovels, a rope, and also a table, evidently of stone for working
the lead melted and used. Further the windlass, probably
that used during the building of the Chancel, was drawn from
its retirement and two carpenters were employed for nine and
a half days in reconstructing it. It is possible that the expenses
recorded for straw and thatching in the first account mean that
the half-finished walls were covered up during the first winter
to prevent damage from frost and bad weather. This was a
device frequently adopted in mediæval building operations,
when outdoor masonry work sometimes practically ceased
during the bad winter months.

Note.—It will be observed that in these two accounts details are "vouched" by the production of "tallies" and not by the "papyrium" or "parcelle."

THE "APPROPRIATION" OF THE PARISH CHURCH OF ADDERBURY.

Among the methods employed by William of Wykeham to secure to his Oxford foundation adequate means of support was the "appropriation" of certain parish churches. One of the churches so appropriated was that of Adderbury in North Oxfordshire and the result is that the College has now a considerable holding of land in the parish of Adderbury.
In Norman times, and even earlier, large numbers of Religious Houses had been founded and it had been usual for their founders to provide for their financial needs not only by direct gifts of land and money but also by assigning to them the advowsons, or rights of presentation to the living, and further the entire endowments of parish churches. In the Thirteenth Century the right of the clergy to tithes was formally recognised by Courts of Law, but this right could be disproved by the production of documentary evidence that the tithes had been assigned to the use of some Religious House. In fact by that time the tithes had in very many parishes been so assigned and a considerable portion of the revenues of monasteries was derived from parochial tithes. The original idea was that the church built by the Lord of a Manor was his to give away at his discretion, and no one was shocked if the endowments of the church were assigned by him by specific grant to the use of monks, who often lived at a distance from the parish. Indeed in earlier times it was thought that monks were a far more desirable object of charity than parish priests. Possibly it was considered by donors not only that the interests of God were better served by the maintenance of religious organizations, but also that the spiritual interests of the parishioners were more secure in the hands of those whose entire life was devoted to the practice of religion. But the main object had naturally been the enrichment of the monasteries to which the endowments of the churches were presented. The result was that before the commencement of the Thirteenth Century various Religious Houses had, in a large number of the English parishes, become possessed of the whole revenues of the churches, including not only tithes but also customary offerings, etc. The church had been "appropriated" and the benefice given so that the particular community was the "Rector," in possession of the endowments, tithes, fees, rights, etc., and also responsible for attending to the spiritual needs of the parishioners.

From a purely religious point of view the result was far from satisfactory. A monastery to the use of which a church with its revenues had been appropriated was burdened with the duty of ministering to the spiritual needs of the parish. Save in the most exceptional cases it was not possible to perform this duty by sending a monk to serve the church. Parish priests needed qualities other than those which monks had acquired and, further, a monk, who was engaged in parochial work, would find himself unable to observe the rules of his order and
to fulfil his more important obligations in quire and cloister. Houses of Canons were in a different position. Their orders commenced through the association of secular priests living under a rule but without taking monastic orders or resigning their private means. Their life remained an essentially clerical one and as clerics it might well be part of their duty to serve the parish churches which belonged to their houses. Premonstratensian Canons were generally allowed to serve in appropriated parishes and licences were also granted to Augustinian Canons to serve as parish priests.

The only alternative in the case of a monastery in possession of an appropriated parish church was to appoint a stipendiary priest, paid—and poorly paid, for the needs of the monastery came first—and dismissable at will. These nominees had no official status and no permanent interest in the parish and the primary consideration to the monastery was the income which it drew. Thus it was possible for a keen, although not hostile, critic of the church conditions of his time, Thomas Gascoigne, Chancellor of the University of Oxford, writing as late as the middle of the Fifteenth Century, to say:

"The monks do nothing for the poor parishioners whose tithes they get, although they say they pray for them and provide an ill-paid vicar. Not content with tithes they try to get the fees and offerings in the churches and refuse even to allow the parish churches to have fonts, that they may force parents to bring their children to be baptized within the abbey walls."

A gradual re-action against the earlier idea that monks were preferable to parish priests took place and during the Thirteenth Century the doctrine came into being that, in cases where a church with its attendant revenues was "appropriated" to the use of a Religious House, full and proper provision ought to be made for the adequate endowment of a "perpetual vicar," who was to reside in the parish and to care for its spiritual needs. This tendency was strengthened by the decision of the Lateran Council held in 1215, which provided that patrons of livings ought to assign a competent portion or provision to the priests. The decision was to the effect that the owner of a parish church was to serve the church himself and not through a vicar, except in cases where the church was "annexed" to a prebend or "dignity." In such cases it was ordained that the owner, when duty called him to serve in the "greater church," must see to it that a fitting and perpetual vicar was appointed, properly instituted and provided with a
sufficient portion arising from the revenues of the church.\textsuperscript{1} The Bishops, who, earlier, had favoured the system of absolute appropriation, followed the new policy of insisting that the care of souls should not be entrusted to temporary deputies and by the time of William of Wykeham it had long been the custom to provide that a permanent or perpetual vicar, with an adequate endowment, should be appointed in all cases where a church, including both the advowson or right of presentation and also the revenues of the benefice in tithes, etc., was handed over to the use of a religious foundation as “Rector.” Such vicars were appointed to the satisfaction of the bishop of the diocese and were answerable to him only for the proper performance of their duties. What was a fitting endowment was not defined. This was left to the discretion of the bishop who, when settling it, usually reserved to himself the power of altering it at a future date should the need for so doing be shown. The most frequent arrangement was that the “Rector,” the religious house to the use of which the church was appropriated, retained the greater tithes, while the lesser tithes and the customary offerings, fees, etc., were allotted to the Vicar.

For an appropriation the consent of the Bishop of the Diocese was required and after the passing of the Statute of Mortmain a licence in mortmain was also obtained in all, or practically all, cases,\textsuperscript{2} although it might seem that the Statute, which

\textsuperscript{1} The text as given in Mansi. \textit{Collectio Conciliorum} XXII, 1019 is:
Lateran Council, 1215, Cap. XXVII.
“\textsc{Ut patroni competentes portionem dimittant clericis.}
Exstituendae consecutudinis vitium in quibusdam partibus inolevit quod scilicet patroni ecclesiarum parochialium et aliae quaedam personae proventus ipsarum sibi penitus vendicantes presbyteris earundem servitio deputatis reliquunt ad eum exiguum portionem ut ex ea congrue nequeant sustentari. Nam ut pro certo didicius in quibusdam regionibus parochiales presbyteri pro sustentatione non obtinunt nisi quarta quarta id est sextamdecimam decimarum. Unde fit ut in his regionibus penes nullus inveniatur sacerdos parochialis qui vel medieam habeat peritiam litterarum. Cum igitur os bovis alligari non debet returantibus sed qui altari servit vivere debet de altare statuimus ut, consecutudine qualibet episcopi vel patroni seu cujuslibet alterius non obstante, portio presbyteris ipsius sufficiens assignetur, qui vero parochialis habet ecclesiam non per vicarium sed per se ipsum illi deserviat in ordine quem ipsius ecclesiae cura requirit nisi forte prebenda vel dignitati parochialis ecclesiae sit annexa, in quo caso concedimus ut is qui talem habet prebendum vel dignitatem cum oporteat eum in majori ecclesia deservire in ipsa parochiali ecclesia idoneum et perpetuum studiaret habere vicarium canonicum institutum qui ut predictum est congruente habeat de ipsius ecclesiae proventibus portionem.”

\textsuperscript{2} See “\textit{Calendars of Patent Rolls}” and “\textit{Inquisitiones ad quod damnum},” passim.
allotted were also to be in compensation for rights of common over the open and commonable fields.

The commissioners appointed under this act made their award on the 9 September, 1768, and assigned and allotted to the College and to the Vicar considerable quantities of land, subsequently enclosed, extinguishing their rights to tithes and their rights of common. It was in consequence of the proceedings under this Act that the gift originally made to the College by its Founder ceased to be an income derived from tithes and became a possession in land.

THE APPROPRIATION.

XVIII.

21 November 1379. From the Bishop of Rochester (Thomas Brinton) to William of Wykeham reciting letters received by him from Pope Urban VI, as to the petition of William of Wykeham for leave to found a College in Oxford and to appropriate to its use the churches of Adderbury and Steeple Morden (co. Cambridge) directing the Bishop to grant the desired licences. The Bishop grants the licence to found a College reserving decision as to the remainder of the petition.

XLI.

24 October 1397. Appointment of proctors by the Warden and Fellows of New College for the purpose of obtaining confirmation from the Bishop of Lincoln of the arrangement between them and Simon Brampton, the perpetual vicar of Adderbury, as to the portion of the vicarage.

Pateat universis per presentes quod nos Custos et Socii universi Collegii Beate Marie in Oxon. vocati Seynte Marie College of Wynchestre in Oxenford Lincolniensis Diocesis Ecclesiam parochialem de Abberbury cum capellis de Bodicote,
The four deeds which follow (XX. XXIV. XXIII. and XV. XIX.) are concerned with the presentation of John Ffylvian to the living of Adderbury by William of Wykeham. John Ffylvian resigned, under the name of John de Wykeham, in 1381, and thereby rendered possible the appropriation of Adderbury to New College.

XX. Dated 2 October 1379.

Deed by which "discretus vir Johannes Ffylvian clericus" appoints Magister Nicholas Wykeham and Magister John
IIIIE

Appropriation.

105

Borton Bachelor in Laws as his proctors to act jointly and severally for him in all matters concerning his presentation to the parish church of Adderbury, including his admittance and induction and the taking possession of the church with all its rights and appurtenances. Witnessed by Dominus Simon Barton capellanus and John Draper clericus in a certain room in the Hospital of St. John the Baptist without the eastern gate of Oxford.

XXIV.

3 October 1379. Letter from the Prior of Wroxtton and the Rector of Broughton to John Ffyvian (reciting letter to them from the Bishop of Lincoln directing an enquiry to be made) instituting him as Vicar of Adderbury.

(Endorsement)

IV.

13 May 1385. Mandate from the "Nuncio" and Collector of the Holy See in England to the Archdeacon of Oxford to compel William Gylle by ecclesiastical censure to pay the sum of fourteen marks owed by him towards the repair of Adderbury Church.

(Endorsement)

MANDATUM PRO REPARACIONIBUS ECCLESIE DE EADDERBURY.

Cosmatus Gentilis de Sulmon. Decretorum Doctor et Sedis Apostolice et Camere Nuncius in Anglia et Collector venerabili et magne sapience viro Domino Archidiacono Oxoniensi in Ecclesia Lincolnensi Salutem in auctore salutis Cum ordinata ad usum ecclesiasticum non debent per laicos deteneri sed in hujusmodi usus converti et deputari Quodque datum est nobis intelligi quod quidam Willelmus Gylle de Adderbury laicus quatuordecim marcas sterilongum pro reparacionibus ecclesie de Eadderbury per nos alias deputatas detineat minus juste Vobis auctoritate apostolica qua fungimur in hac parte in virtute sancte obediencie committimus et mandamus quatenus dictum Willelum ad satisfaciendum de dicta summa ad usum hujusmodi per censuras ecclesiasticas compellatis. Et quid in premissis feceritis nos citra festum beati Petri Advincula proxime futurum certificari curetis per literas vestras patentes harum seriem ac execucionis vestre in hac parte modum plenius continentes sigillo vestro consignatas. Datum London. sub sigillo nostro quo utimur in officio xiii° die Mensis Maii Anno Domini M°.CCC.LXXX° quinto.

This William Gylle, described as formerly Firmarius, appeared in the first existing Roll, that for 10–11 Richard II, as owing a sum of £9 19s. 9d., which was set down as being in suspense and which continued to be noted in the same way in subsequent Rolls. The amount is in fact almost exactly equivalent to fifteen marks. In 13–14 Richard II. (1390–91) an attempt seems to have been made to recover the amount due by process of law, for the Roll for that year contains an entry: "et in expensis Johannis Salmeyn existentis apud Dadyngton coram Constabulario et Mareschallo Domini Regis videlicet pro ixli. xixs. ixd. quos Willelmus Gylle nuper firmarius Rectorie habet in manibus." This attempt apparently failed, just as
the censure of the Archdeacon had failed to coerce the recalcitrant Gylle into payment. The following Rolls continue to enter the amount as held in suspense against Gylle until 21–22 Richard II. when the matter was settled amicably. Gylle paid the sum of £6, which is recorded as paid over by the firmarius to the bursars, and £3 19s. 9d. was “allowed” to him as shown by the entry:

“De quibus allocatum Willelmo Gylle nuper firmario de Abburbury lxxixs. ixd. ultra vili. liberatos bursaris ut in liberacione denariorum eo quod idem Willelms Gylle minus injuste oneratur ultra summam predictam ut declarabatur super audicionem istius compoti in presencia Custodis et Sociorum Collegii unde idem Willelms de predictis vili. acquietatur de omnibus occasionibus tangentibus summam predictam sigillo Collegii sigillatum.” After this William Gylle disappears from the Rolls.

T.F.H.

COURT ROLLS.

Few of the early Court Rolls of the manor of “Adderbury Rectoria” have survived, although for the seventeenth and eighteenth centuries a full series is in existence. Those which are here printed include the records of Courts held under Richard II. (five), Henry IV. (one), Henry VI. (four), Henry VIII. (two), and Philip and Mary (one). The manor was of an unusual character for it consisted of the glebe lands of the church only and as it was without over-lord it had technically no place in the manorial system. In fact it functioned in every respect as an ordinary manor and the Court Rolls now printed show it engaged in ordinary manorial business. Those of a later date have little interest, except perhaps for the history of special parcels of land. They are a mere record of the conveyancing transactions of manorial tenants.

The officials mentioned are the “decennarius” (tything-man) or “capitalis franciplegius” (chief frankpledge) and also the ale-taster, the two offices being usually united in one holder. As is usual in manorial records, ale is an outstanding feature and in almost every Court fines were imposed for breaking the “Assize of Ale,” brewing inferior ale or overcharging. It paid better to have brewed and been fined than never to have
browed at all, and the offenders were often respectable inhabitants, who appear elsewhere in the responsible position of affereors or assessors. Receiving or sheltering people contrary to the assize, as a refuge from justice, is also a fairly frequent offence. The Court entertains actions in respect of land (10 and 12 Richard II.) and also actions for debt (12 and 13 Richard II.). In one instance an attachment is issued against an absent debtor (12 Richard II.); in another licence is granted to settle an action for debt (13 Richard II.). One Court (31 Henry VIII.) hears a case of abuse, assault and battery, the fine imposed being twopence (or a modern five shillings). Tenants are fined for allowing their houses to fall into disrepair and in one case (33 Henry VI.), obviously of some delicacy, the College as Lord of the Manor is presented for not keeping a bridge in proper repair and the decision is that counsel is to be taken with the Lord.

Timber is of some importance. One tenant constructs a ladder out of an elm blown down by the wind and it is ordered that it remain on the premises for the use of the premises, and at the same Court (13 Richard II.) the same tenant is fined for felling a tree for use in repairs. A fine is imposed (Henry IV.) for felling an elm and taking it out of the manor to Bloxham.

The Court Roll for 16 Henry VI. records the infliction of a fine of twopence upon Johanna Smyth for not coming to the “bedryp,” that is for not doing her turn at harvest-work. Some at least of the tenants were obliged to render these services and from some of the Comptus Rolls under Henry VI. it appears that the “opera custumaria” were sold to the Bailiff for a yearly sum of six shillings and eightpence. Tenants usually shirked these distasteful duties and the Court had to enforce performance.

Two lists of tenants are recorded, one of those holding according to the customs of the manor, eight names being given of tenants who held between them eight messuages and forty three acres of land; the other of free tenants, one name mentioned being that of Richard Fynes, “Lord of Broughton.” Curious instances appear of “heriots” due to the Lord on death, transfer, etc. and the list includes a pigling, a red cow, a horse, an “affrus” or draught-horse, brass pots of varying value and also money.

The words “misericordia” and “heriottum” occur so frequently that they are curtailed to “mia;” and “her.”
